ILLINOIS CROP REPORT,

—FOR—

MAY 1, 1892.

Synopsis of the Reports of Correspondents upon the Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, May 1, 1892.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of May.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the returns made by this Department.

A large number of the correspondents have been reporting to this Department for the past sixteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters. The correspondents number nearly six hundred, and are so distributed over the State as to represent each locality.

The State covers such an extended area from North to South (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER WHEAT.

The May 1 condition of winter wheat is much more encouraging than it was earlier in the season, when it was thought to be badly winter-killed. Since spring set in it is seen that but a small portion of the damage done is due either to winter-killing or Hessian fly, much the largest part having been done by the excessive rains and floods.

It is estimated that 7 per cent. of the area planted last fall, 1,895,146 acres, was destroyed by the causes named, leaving an area of 1,767,205 acres for harvest.

No reports whatever have been received of damage by Hessian fly this season.

376222

Althongh the May 1 condition of this crop is not so flattering as on the same date last year, there is nevertheless promise of an abundant harvest, should there be favorable weather until the grain is ripe.

The present condition in the northern division is 87 per cent. of a seasonable average; 92 per cent. in the central, and 89 per cent. in the southern division of the State.

SPRING WHEAT.

The area devoted to spring wheat is almost as large as that of 1891. The condition of the crop is not quite so good as at this date last year, being but 90 per cent. of an average in northern Illinois, and 85 per cent. in the central division, while the one county reporting on this crop in southern Illinois, gives both area and condition 100.

OLD WHEAT.

The wheat crop of 1891, 34,620,828 bushels was much more than double that of 1890, and 17 per cent. of it, or 5,563,995 bushels remained in producers' hands on May 1, 1892. After deducting the amount required for seed, and consumption for a year from the 1891 crop, there remained a surplus of 16,853,536 bushels.

The following table gives the amount of "old wheat" in first hands the first of May, since and including 1880:

Year Produced.	Crop in bushels.	Per cent. crop on hand following May 1.	Amount crop in producers' hands following May 1.	Surplus wheat above seed and consumption at harvest	Deficit at harvest.
1880	56,508,309	*15	8,476,246	39,851,883	
1881	22,374,163	13	2,924,039	5,765,414	
1882	52,323,261	15	8,174,634	36,214,133	
1883	20,374,572	15	3,208,358	4,575,152	
1884	34,367,493	18	6,350,202	17,367,794	
1885	5,299,243	14	1,201,904		5,439,786
1886	28,284,086	15	4,000,931	12,082,999	
1887	38,076,486	13	5,034,875	21,942,119	
1888	33,916,920	12	4,022,569	17,334,947	
1889	37,201,916	15	5,722,594	20,919,433	
1890	13,608,504	12	1,580,903		2,002,400
1891	34,620,828	17	5,563,995	16,853,536	
Average	31,412,982	15	4,618,437	19,290,741	3,721,093

*Estimated.

The amount of surplus wheat above seed and consumption given in the above table is determined by deducting at time of harvest from the entire crop of the season, the quantity required to seed an area equal in extent to that harvested, at the rate of 1⅛ bushels per acre, and provide 4 bushels per capita for consumption during the ensuing twelve months.

RYE.

The area seeded to rye last fall, 171,914 acres, is 5 per cent less than the 1891 area. Of this area, about 5 per cent. was winter-killed or destroyed by floods, principally the latter, leaving 163,318 acres which will probably be harvested. The plant being hardier than wheat, has stood the cold, wet weather better, and is stronger and in rather better

condition than wheat, averaging about three points higher in each of the three grand divisions.

In the northern division of the State the May 1 condition is 89 per cent, of an average; in the central 95 per cent., and 92 per cent. in the southern division.

OATS.

There is a decrease in the area of oats as compared with 1891 of 12 per cent. In the northern portion of the State the area is 1 per cent. larger than last year, but in southern Illinois it is 10 per cent. less, and in the central division 25 per cent. less.

This deficiency is largely due to the continuous and heavy rains which have prevailed for the past month or six weeks, making it difficult, if not impossible, to plant oats. In some localities the rains came immediately after the oats were put in, and either washed them out, or buried them so deeply in the mud that there is very little hope of their ever getting to the surface, and even with warm, dry weather in the future there will be very little oats harvested in central Illinois this season.

The condition of oats, as well as the area, is better in the northern division than in either of the others, being 87 per cent. of an average.

In central Illinois the May 1 condition of oats is but 73 per cent., as compared with 94 per cent. on May 1, 1891.

In southern Illinois the May 1 condition is encouraging for 80 per cent. of an average yield per acre.

BARLEY.

But two counties in the southern section of the State make any report on barley, viz.: Clay and St. Clair. The condition of the crop in these two counties averages 97 per cent. and the area is 5 per cent. less than the area of 1891.

No barley whatever is reported in central Illinois.

In the northern division, where twenty counties make a report on this crop, the area is 95 cent. of that of last year, and the May 1 condition is 11 per cent. below a seasonable average.

OLD CORN.

The corn crop of 1891, 217,982,050 bushels. was much larger than that of the previous year, and on May 1, 1892, over one-third of it still remained in first hands, or 75,969,599 bushels.

In the northern division 39 per cent. of last year's crop was in producers' hands May 1; in the central division 32 per cent., and in southern division but 24 per cent.

The following table gives the amount of "old corn" in the producers' hands May 1, the past thirteen years, as well as the extent of the crop produced each succeeding year.

Year Produced.	Crop in bushels.	Per ct. corn on hand following May.	Bushels corn in producers' hands following May.
1879	305,913,377	32+	99,229,889
1880	250,697,036	28+	71,929,343
1881	174,491,706	21+	37,445,964
1882	179,471,729	24+	43,450,857
1883	186,583,558	21+	39,478,621
1884	207,556,662	24+	50,102,264
1885	230,922,298	24+	57,047,027
1886	182,755,053	24+	43,346,028
1887	129,537,603	18+	23,573,279
1888	277,726,451	33+	92,584,238
1889	247,980,589	36	90,503,175
1890	164,512,020	20	32,653,868
1891	217,982,050	35	75,969,599
Average	212,010,010	27	58,254,935

MEADOWS.

Meadows occupy a smaller area than last year by 3 per cent. In the northern portion of the State the area as compared with 1891 is 97 per cent.; in the central division it is 94 per cent., while in southern Illinois there is an increased area of 1 per cent.

This increase, though slight, is encouraging, as indicating more interest in live stock than has been taken in this section in years past. Wheat has, for many years, been the staple product of southern Illinois, but a more diversified system of farming is growing in favor, which will no doubt prove beneficial to the agriculturists of that section.

The condition of meadows is not so good as we could wish at this season. They were pastured late last fall, and while the excessive precipitation has not materially injured them, the cold weather has prevented their growth, so that they are not so advanced as usual at this date.

Clover was winter-killed to greater or less extent in the counties of Jo Daviess, Lee, Lake, Ogle, Stark, Stephenson and Winnebago. This is especially true of old meadows. New ones have not suffered so much.

The May 1 condition of meadows is 90 per cent. in northern Illinois, 97 per cent. in central and 98 per cent. in southern Illinois.

Meadows in this State are almost entirely clover and timothy, with some red-top, and a little wild grass.

PASTURES.

The area in pastures this season is but 98 per cent. as compared with last year.

In southern Illinois the area remains unchanged, and in the northern portion of the State the decrease is but 1 per cent., while in the central division it amounts to 5 per cent.

The condition of pastures is not so good as that of meadows. They were too closely cropped last fall, and where stock was turned on them early this spring, the ground was so wet that they were badly trampled in.

Pastures were winter-killed in Kankakee and Winnebago counties, and probably in some others.

The May 1 condition of pastures was 89 per cent. in the northern division of the State, 98 in the central, and 95 in the southern division.

Blue grass is the principal pasture used, although there is a great deal of clover also.

Warm, bright weather is now needed to bring both meadows and pastures to a seasonable condition.

LIVE STOCK.

HORSES.

The number of horses in the State at this time is 1 per cent. larger than on corresponding date last year. Their condition is generally good, being 97 per cent. of a seasonable average. While reports of poor health among horses have been received from the counties named below, the disease has usually assumed a mild form, and little loss has occurred.

Reports of distemper among horses have been received from the counties of Henderson, LaSalle, Franklin, Lake, Woodford, Clay, McLean and Menard.

There have been some cases of abortion in Iroquois and Hancock counties. In Jasper county horses have suffered with catarrhal fever, and there have been some fatal cases.

In Whiteside, Winnebago and Monroe counties horses have been affected with epizootic or grippe. They are usually taken with a slight cough; after that subsides they are lame in some portion of the body, which becomes inflamed and swollen. The disease has not been fatal.

Kidney trouble has prevailed among horses to some extent in the counties of Woodford and Douglas

In Edwards county horses have been troubled with pink-eye and in Tazewell with sore eyes, while a few cases of glanders are reported from Cumberland county.

MULES.

Mules are not quite so numerous as last year, there being a decrease of 4 per cent. The farmers of Illinois have never used mules so largely as those of some States, preferring half or three-quarter blood draft horses for their heavy work.

The condition of mules is almost up to the average.

CATTLE.

There is a deficiency in the number of cattle in the State as compared with last year of 6 per cent. In northern Illinois there is 95 per cent., and in the southern division 96 per cent., but in the central division only 92 per cent. While cattle, in common with other live stock, are very thin in flesh, they are generally healthy and when they can have good pasturage it is expected they will soon accumulate the desired flesh.

Their condition as compared with an average is 96 per cent.

A few cases of black-leg are reported among yearlings in Lee county. One herd of cattle in Douglas county has had pink-eye, and in Edwards county the cattle have sore mouth. Some of them stiffen and die, and some lose their hoofs. A number of cattle have died in one locality in Carroll county. Cause unknown.

DAIRY COWS.

The proportion of dairy cows on hand is rather larger than of other cattle, and their condition about the same. Some abortion has occurred among cows in Iroquois county, and in Peoria county a good many cows are ailing and some have died, perhaps for want of care.

HOGS.

Fewer hogs are reported in this State now than in 1891 by 11 per cent. Less than a dozen counties report the number equal to that of this date last year.

Although there are some reports of hog cholera and loss of pigs, the per centage is small, and the May 1 condition is within 2 per cent. of an average.

Reports of hog cholera come from Hancock, Pike, Schuyler, Johnson, Fayette and Jefferson counties, and in Henderson, Hancock and Macoupin counties there has been quite a loss of pigs.

SHEEP.

There is an increase of 1 per cent. in the number of sheep this year, which is quite general all over the State, and the condition is good. No reports whatever have been received of disease among sheep.

Fayette county reports that a good deal of attention is being paid to sheep there.

BEES.

Bees have suffered severely during the past winter, and in a number of counties they are nearly all dead.

In Mason, Jersey and Sangamon counties about one-fourth of the bees were winter killed; in Jo Daviess, Kendall, Jasper, Carroll, Mercer and Ogle counties one-half were destroyed, while the bees are nearly all dead in Macoupin, Cass, DeWitt, McLean, Menard, Pike, Shelby, DuPage, Putnam, Rock Island and Whiteside counties. In addition to these, discouraging reports on bees come from Iroquois, Lee, Brown, Champaign, Christian, Piatt and Franklin counties.

Last season was a very unfavorable one for bees, and the little honey they were enabled to store was of very poor quality, being largely made of honey dew, and the bees either starved, or suffered from lack of proper food.

SPRING WORK.

It is many years since spring work has been so seriously delayed as has been the case this year, being from two to three weeks late all over the State, and at this writing it is an open question when farmers will be able to get into their fields in many sections.

The spring has been unusually late throughout the State, and the "procrastinated precipitation" which was so much needed, was so continued as to render plowing almost impossible.

In the northern division of the State the spring plowing, as compared with average years, was as 67 to 80, in the central division as 27 to 61, and in southern Illinois as 37 to 64.

The soil generally is in poor condition, and is not favorable for the production of good crops, even where they can be put in.

Very little corn has been planted, and with the ground so wet, and even flooded on much of the bottom land, there is little prospect that much corn will be planted before June.

It was thought early in the season that the reduced area of oats would result in a corresponding increase in the area of corn, but it is impossible to predict what it will be, under existing conditions.

IMPROVED METHODS.

Some experiments have been made with cut corn fodder, which have proved quite successful, one farmer in Edgar county considering it as profitable food for stock as the same amount of good timothy and clover hay.

FRUIT.

The fruit trees, excepting peaches, have bloomed profusely, and a large crop is anticipated. Peach trees have been winter-killed in some counties, and the bloom is light.

No insects have commenced their depredations on fruits, so far as noticed.

WAGES PAID FARM HANDS.

In the northern and central portions of the State there are not enough farm hands to supply the demand, and wages range a little higher than in past years.

While this is to a certain extent true of the southern division as well, less hired help is used there and it is not so difficult to obtain.

There is great need of intelligent farm hands, but the continued migration of the boys to the cities leaves the farmers dependent upon such help as they can get, and in many cases it is little better than none.

As compared with 1891 the wages paid farm hands this season are as follows: Per day with board, 1891, $0.83; 1892, $0.85. Per day without board, 1891, $1.12; 1892, $1.13. Per month with board, 1891, $17.47; 1892, $18.13. Per month without board, 1891, $24.22; 1892, $25.00.

The average wages paid farm hands during the past thirteen years in the three grand divisions of the State, are given in the following table:

DIVISION.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board.	Without board.
Northern	$0 99	$1 28	$19 64	$27 52
Central	85	1 12	18 09	24 73
Southern	66	92	14 56	20 93
Average	$0 83	$1 11	$17 43	$24 40

The wages paid farm help in the three divisions of the State, during the past thirteen years, is given in the following tables:

NORTHERN DIVISION.

YEAR.	PER DAY.		PER MONTH.	
	With board.	Without board	With board.	Without board.
1880	$0 94	$1 15	$17 55	$25 25

1892	65	90	15 00	21 45
Average	$0 66	$0 92	$14 56	$20 93

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth of crops, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The observers of the Department are, as a rule, experienced farmers who have made the study of the condition and yield of crops their life work; conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

ILLINOIS CROP REPORT,

—FOR—

JUNE 20, 1892.

Synopsis of the Reports of Correspondents upon the Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, June 20, 1892.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the twentieth of June.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the returns made by this Department.

A large number of the correspondents have been reporting to this Department for the past sixteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters. The correspondents number nearly six hundred, and are so distributed over the State as to represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

CORN.

The excessive rains of the past spring have not only delayed corn planting, but even prevented it altogether on quite a large area which was intended for that crop. At this writing, June 20, many farmers are still hoping to put in more corn, but the unfavorable weather, and the approach of hay and wheat harvest, will interfere materially with this plan.

It was impossible to get corn in except at odd times, and as a consequence it came up irregularly and is very uneven, which makes it difficult to form a fair estimate of its condition. Between the beating rains, the sun for two or three weeks past has baked the ground, so that it is very hard and tough, and not easy to cultivate. Much corn has been plowed only once, and some not at all, so that the weeds are getting quite a start.

With so many adverse circumstances to contend against, corn will have a hard struggle to make even a fair crop, but the quality of the seed corn, which was exceptionally good over the entire State, will be a strong factor in its favor, and with a late fall our farmers may find their gloomy forebodings happily disappointed.

NORTHERN DIVISION.

In the northern division of the State the area devoted to corn is 15 per cent. less than in 1891, when 2,812,575 acres were planted.

The condition of the crop in this division is more unfavorable than in either central or southern Illinois, being but 65 per cent. of a seasonable average. In but four counties in this division, Carroll, DuPage, McHenry and Warren, is the June 20 condition better than three-fourths of an average at this date.

The quality of the seed corn used was 97 per cent. of an average. The first appearance of corn above ground in northern Illinois, was reported from Livingston county on May 1, but much the larger portion appeared between May 10 and June 1.

CENTRAL DIVISION.

In the central division there is a decrease in the area from that of 1891 of 16 per cent., leaving the present area 1,792,174 acres.

The condition is 2 points better than in northern Illinois, or 67 per cent. of an average. The June 20 condition is above three-fourths of an average in the counties of Brown, Cass, Cumberland, Piatt, Schuyler, Shelby, Tazewell and Vermilion.

The seed corn used was but 1 point below an average.

Menard county carried off the palm in this division as to the first appearance of corn, which was noted April 24, but the bulk of that planted remained invisible until May 10 to 20.

SOUTHERN DIVISION.

The area in corn in southern Illinois, this season, is 86 per cent. as compared with he area of last year, when 808,031 acres were in corn. In Hardin, Perry and Randolph counties the area planted is as large as last year, and in Hardin county the condition of the crop is a seasonable average.

The condition of the crop throughout this division is three-fourths of a seasonable average, or 8 and 10 points above the condition in the northern and central divisions of the State respectively.

The seed corn used in this division, as well as in the other portions of the State, was excellent.

Massac and St. Clair counties both report corn above ground April 10.

BROOM CORN.

The broom corn area in this State is less than that of last year, by 16 per cent. The only counties showing an increased area over 1891, are Douglas and Massac, which each report an increase of 10 per cent.

The condition of the crop will average 80 per cent. In southern Illinois a full average condition is reported.

SORGHUM.

Sorghum is not receiving as much attention as for a number of years past, and the area reported this year is but 81 per cent., as compared with 1891.

The June 20 condition is favorable for but 72 per cent. of an average yield per acre.

WINTER WHEAT.

The continued wet season, covering a period of nearly four months, whilst it tarded the sowing of oats and spring wheat, and the planting of corn, did not inju the growing wheat except where it was inundated or insufficiently drained. Where t land was well tiled, and outlets provided for the water there was no injury whatever to wheat.

Quite a large area of winter wheat has been destroyed since May 1, by the floods of the Mississippi, Illinois, Wabash, Sangamon, Vermilion and other streams traversing the "wheat belt" of the State, which the correspondents have not taken into account, further than to call attention to the fact, making no estimate of the area so destroyed.

No complaints have been received of injury to wheat by insects, and very few of rust or smut.

NORTHERN DIVISION.

In the northern division, where but little winter wheat is raised, the June 20 condition is 90 per cent., or 3 points better than on May 1. Harvest is still some distance in the future in this division.

CENTRAL DIVISION

The condition of winter wheat in central Illinois has declined 2 points since May 1, and is now 90 per cent. of a seasonable average. In the counties of Cass, Clark, Coles, Cumberland, Douglas, Edgar, Logan and Shelby, the June 20 condition is an average or better.

In Adams, Christian, Fulton, Greene, Jersey, Macon, Macoupin, Pike, Sangamon, Schuyler, Scott and Vermilion counties, covering the largest winter wheat growing section in this division, the depreciation in condition since May 1, is more than 10 points.

Some wheat was cut in Clark county June 17, but harvest will not generally begin in central Illinois before June 25.

In Adams county some farmers are complaining of smut in their wheat, and in Macoupin rust is reported by some wheat growers.

SOUTHERN DIVISION.

There has been a very marked improvement in the condition of winter wheat throughout the southern division of the State since May 1, when the condition was given as 89 per cent., and the prospect is good for an average yield per acre.

The first harvest reported was on June 10, in Gallatin and Richland counties, and in many counties in this section harvest is practically finished. The weather has been favorable for harvest in this section, but no threshing worth mentioning has been done.

In the counties of Franklin, Gallatin, Saline and White, smut is developing in the wheat.

SPRING WHEAT.

Spring wheat has held its own in northern Illinois, where it is principally grown, and promises 90 per cent. of an average yield per acre.

The few counties making any report whatever on this crop, in central and southern Illinois, report a average condition.

OATS.

During the past six weeks the condition of oats has improved somewhat, and with favorable weather until harvest, 85 per cent. of an average yield per acre may be expected.

The copious rains have caused a very rank growth, and fears of lodging are entertained in some quarters.

The grain plant louse, which was so destructive to oats two years ago, and did considerable damage last year, seems to have ceased its depredations in this State, perhaps was "drowned out."

NORTHERN DIVISION.

Although oats in northern Illinois have not improved in condition since May 1, neither has there been any falling off, taking the entire division into consideration, but in the few counties named below there has been a very marked declination. Grundy county is 17 points lower than on May 1, Henderson 10, Iroquois 9, Livingston 20 and Ogle 40.

In Carroll county the condition of oats has improved 22 points since May 1, DuPage 20, Lake 35, McHenry 5, Stephenson and Whiteside 6, Will 5 and Winnebago 15 points.

The average condition of oats in northern Illinois is 87 per cent.

CENTRAL DIVISION.

In the central division of the State the condition of oats is 5 points better than on May 1, and 78 per cent. of an average yield per acre is now anticipated.

The most marked improvement in this section is in Shelby county, where a full average yield per acre is expected.

SOUTHERN DIVISION.

In southern Illinois the June 20 condition promises 91 per cent. of an average yield per acre. In the following named counties a better than an average yield per acre is expected, as noted: Hardin 105 per cent.; Jefferson 102; Johnson 105; Lawrence 100; Massac 133; Perry 120; Pope 100; Pulaski 110; Saline 100.

RYE.

The condition of rye has decreased 1 point in northern Illinois since May 1, being now 88 per cent. of a seasonable average; in the central division of the State there is a decrease of 2 points, leaving it 93 per cent., while in southern Illinois the average condition is 96 per cent. an improvement of 4 points in the past six weeks.

BARLEY.

In both the northern and southern divisions of the State, the condition of barley is 87 per cent. of an average. No barley is reported from central Illinois.

MEADOWS.

Meadows have improved in condition in northern Illinois, 12 points since May 1, and are now 2 points above an average. In some places they are growing very rank, and it is feared they will be hard to cut, but both yield and quality promise well.

In the central division of the State, the June 20 condition is a full average, and 3 points better than on May 1.

In Champaign county an unusual amount of blue grass, in meadows that were cropped short last fall, is reported.

The condition of meadows is not quite so favorable in southern Illinois as in the other divisions of the State, being but 96 per cent., a decline of 2 points in the past six weeks, but this is so far above the average for the past two years that "Egyptian" farmers have no ground for complaint on this score.

PASTURES.

Pastures are looking better than for several years past at this date, and there has been an improvement of from 4 to 16 points in the different grand divisions of the State since May 1.

In northern Illinois the June 20 condition is 105 per cent., in the central division 101 and in the southern 99 per cent.

Farmers in some parts of the State claim that while the growth of pastures is most luxuriant, the excessive rains have made them watery, and not so nutritious as usual.

In Ford and some other counties, they are badly tramped, on account of the soft condition of the soil for so long a time.

IRISH POTATOES.

The area devoted to this crop this year is 9 points less than in 1891; in the northern division of the State, 15 points less in the central and 8 pointS less in the southern division.

In the following counties there is an increase in area as noted: Lake county, 2 points; Whiteside 3; Will 2; Calhoun and Logan 5; Lawrence 2; Monroe 16; Randolph 37 and Williamson 5.

In northern Illinois the condition of Irish potatoes is but 85, as compared with a fair average; in the central division 83 per cent., and in the southern 90 per cent. The outlook is more discouraging in the northern and central divisions than for some years past, but is considerably better in southern Illinois than in 1890.

SWEET POTATOES.

Sweet potatoes receive but limited attention in this State, and the 1892 area is 10 per cent. less than that of 1891.

The June 20 condition of the crop indicates that there will be 85 per cent. of an average yield per acre in northern Illinois, 88 per cent. in central and 90 per cent. in the southern division.

FLAX.

The small area devoted to flax last season, 4,294 acres, will be reduced by about 14 per cent. this year, and but 80 per cent. of an average yield per acre is anticipated at this date.

CLOVER.

The area of clover this year as compared with 1891, is 96 per cent. The greatest decrease is in the northern division, where there is a reduction of 9 per cent., while in the central and southern divisions the decrease is but 1 and 2 points respectively.

The June 20 condition is 1 point below a seasonable average in northern Illinois, and 1 point above in the central division, while in southern Illinois it is 5 points below an average.

HUNGARIAN AND MILLET.

These crops are receiving more attention than heretofore in the northern and central portions of the State, the area as compared with 1891, being 110 and 112 per cent. respectively. While some counties in these divisions show a very largely increased area, there are very few which are not somewhat larger than last year.

In southern Illinois a few counties show a very material reduction of area, and the greatest increase noted is 20 per cent. in Clay county, so that the area of this division is 6 per cent. less than last year,.

TOBACCO.

Two counties in the northern division of the State, report a larger area than last year by 10 per cent., while the other county in this division in which tobacco is reported, shows a corresponding decrease in area.

The area in this crop in southern Illinois is 89 per cent., or 11 points less than in 1891.

The present condition of the crop indicates 80 per cent. of an average yield per acre in the northern division of the State, and 90 per cent. in the southern.

FIELD BEANS.

There is a reduced area in this crop this year, as compared with 1891, of 7 per cent., and the present condition of the crop is 87 per cent. of a seasonable average.

FIELD PEAS.

Very little attention is given to field peas in this State, and the area planted this year is 92 per cent., as compared with the 1891 area.

FRUITS.

The season to date has not been favorable for fruit. The late frosts and the heavy rains, when many fruits were "setting," caused much falling, even where the bloom was profuse.

There will be a very small crop of apples, and not so many peaches as last year. In Greene and some other counties, the orchards are attacked with blight or some similar affection.

CHERRIES.

The yield of cherries was very small this year, being but 3 points more than half an average crop in the northern division, 36 per cent. in the central, and 60 per cent. in the southern division.

STAWBERRIES.

While strawberries were a little more prolific than cherries, the yield was but 76 per cent. of an average. In northern Illinois the yield was 76 per cent. of an average; in the central division 78 per cent., and in the southern division 74 per cent.

RASPBERRIES.

Raspberries have done fairly this season, and have yielded 86, 89 and 87 per cent. of an average crop, in the three grand divisions of the State.

GOOSEBERRIES.

The yield of gooseberries was 11 per cent. less than in 1891, being but 81 per cent. of an average. The yield was somewhat larger in the southern than in the other divisions, but there was little difference between them.

CURRANTS.

In northern Illinois the yield of currants was little more three-fourths of an average but in the central and southern divisions it was 83 per cent. of an average. In Clark county a worm has destroyed many of the currant bushes.

VINEYARDS.

There is a very small reduction in the area of vineyards in northern and central Illinois, compared with last year, but none in the southern division. In the northern division the June 20 condition is favorable for 92 per cent. of an average crop, in central Illinois for 87 per cent. and in the southern division for 94 per cent.

In Hancock county, one of the principal grape growing counties of the State, a sma brown worm has attacked the grapes, and few, if any, will mature. This pest is something new there.

YOUNG LIVE STOCK.

PIGS.

No county in the northern division of the State reports an average number of pigs this season, and but two in the central—Logan and Shelby. In these sections the comparative number is 79 and 84 per cent. respectively, and their condition 95 and 96 per cent.

In southern Illinois the number of pigs is but 9 per cent. below an average, and their condition is 94 per cent.

LAMBS.

Spring lambs were nearly a full average in number, and their condition is excellent.

WOOL.

The wool clip in 1892 is as large as last year in both northern and central Illinois, and one point above that of 1891 in the southern division of the State.

CALVES.

The number of calves this season was 94 per cent. as compared with last year, and their conditions nearly a full average.

COLTS.

The proportion of colts is about the same as that of calves, and their condition also in the northern and central portions of the State, but in southern Illinois their general condition is uot quite so good, though no complaints of disease have reached this office, of any kind of live stock. It is rather an abnormal condition of affairs, that while the average cost of service is higher in the northern than in either of the other divisions of State, the value of the colt at weaning time is less.

The average cost of service in the three divisions, beginning with the northern and going south, is $12, $11 and $9, while the value of the colt at weaning time, taken in the same order, is $35, $37 and $39.

In northern Illinois 10 per cent. of the colts are lost prior to weaning, and 6 per cent. in each of the other divisions.

GENERAL REMARKS.

The "oldest inhabitant" cannot remember such a season as the one which we have just passed through.

Beginning with a drought last summer and fall, which interfered very materially with the sowing of wheat, and injured the pastures, a dry winter was followed by excessive and unusually beating rains, which delayed oat sowing in some places and washed out many that were seeded. These severe storms lasted well on into June, and consequently farmers were frequently prevented from getting into the fields, and the area of all spring planted crops is necessarily much smaller than usual.

After the crops were in, the hot sun baked the ground so that it became very hard and tough, and almost impossible to plow. Perhaps the efficacy of tile drainage was never so severly tested or completely establised as this season. While no system of drainage would entirely avail under such downpours as the present season has witnessed, the farmers in the best drained sections have seen its advantages, and comparatively few reports from the northern and central portions of the State but say that more tile will be laid as fast as possible.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth of crops, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The observers of the Department are, as a rule, experienced farmers who have made the study of the condition and yield of crops their life work; conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

ILLINOIS CROP REPORT,

—FOR—

MAY 1, 1893.

Synopsis of the Reports of Correspondents upon the Acreage and Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, May 1, 1893.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of May.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large portion of the correspondents have been reporting to this Department for the past seventeen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER WHEAT.

The past season has been a very trying one on winter wheat, and the outlook on May 1 is exceedingly discouraging.

The weather at seeding time was so dry that less wheat was put in than usual, and as germination was slow the young plant was not in good condition to withstand the rigors of the winter. On April 1 the area winter-killed was estimated at 22 per cent. of the area seeded, 1,568,285 acres. The greatest damage resulted from the sleet and ice in the early

part of February, which completely covered the fields and smothered the growing plants. Since April 1 very heavy rains have prevailed in some sections of the State, and at this date many fields are under water, and the damage of 11 per cent. since that date is due to floods. On May 1 the reports of correspondents indicate a loss by winter-killing and floods of 33 per cent., leaving but 1,047,361 acres for harvest, and it is probable that much of this will be plowed up for corn later in the season.

In the northern division of the State 30 per cent. is reported as winter-killed, 49 per cent. in the central division, and 18 per cent. in southern Illinois.

The area for harvest according to these figures is as follows: Northern Illinois, 73,609 acres; central Illinois, 356,145 acres; southern Illinois, 617,607 acres.

It will be observed that the greatest loss is reported from the central division of the State, where the damage amounts to nearly half of the entire area.

The average condition of the crop on May 1 is 70 per cent. It is 72 per cent. of a seasonable average in the northern division, 61 per cent. in the central and 83 per cent. in the southern division.

In Clinton county some Hessian fly is reported in early wheat. On land overflowed in 1892 in Alexander county wheat is too rank, and some has lodged already.

SPRING WHEAT.

The area of spring wheat is 10 per cent. less than in 1892, when nearly 50,000 acres were seeded. The condition of the crop is 91 per cent. of a seasonable average.

OLD WHEAT.

Owing to the unusually large wheat crop raised in the northwest last year the demand for Illinois wheat was less than usual, and a larger proportion remains in the farmers' hands on May 1 than ever before, viz.: 18 per cent.

In northern Illinois 20 per cent. or 572,644 bushels is in first hands on May 1; 20 per cent. or 2,577,382 bushels in the central division, and 15 per cent. or 2,278,034 bushels in the southern division of the State. The total amount of old wheat in producers' hands on May 1 is 5,428,060 bushels.

The following table gives the amount of "old wheat" in first hands the first of May, since and including 1880:

Year Produced.	Crop in bushels	Per cent. crop on hand following May 1.	Amount crop in producers' hands following May 1.	Surplus wheat above seed and consumption at harvest.	Deficit at harvest.
1880	56,508,309	*15	8,476,246	39,851,883	
1881	22,374,163	13	2,924,039	5,765,414	
1882	52,323,261	15	8,174,634	36,214,133	
1883	20,374,572	15	3,208,358	4,575,152	
1884	34,367,493	18	6,350,202	17,367,794	
1885	5,299,243	14	1,201,904		5,439,786
1886	28,284,086	15	4,000,931	12,082,999	
1887	38,076,486	13	5,034,875	21,942,119	
1888	33,916,920	12	4,022,569	17,334,947	
1889	37,201,916	15	5,722,594	20,919,433	
1890	13,608,504	12	1,580,903		2,002,400
1891	34,620,828	17	5,563,995	16,853,536	
1892	30,578,543	18	5,428,060	13,083,069	
Average	31,348,802	15	4,745,332	18,726,676	3,721,093

*Estimated.

The amount of surplus wheat above seed and consumption given the above table is determined by deducting at time of harvest from the entire crop of the season, the quantity required to seed an area equal in extent to that harvested, at the rate of 1⅓ bushels per acre, and provide 4 bushels per capita for consumption during the ensuing twelve months.

RYE.

While rye has not suffered quite so much as wheat, the area winter-killed or destroyed by floods is 20 per cent. of the area seeded last fall, leaving 115,938 acres for harvest.

The average condition of the crop is 12 points better than that of wheat, being 82 per cent., or 78 per cent. in the northern division, 80 in the central and 91 per cent. of a seasonable average in the southern portion of the State.

OATS.

The reduction in the wheat area is met to some extent by an increased oats area, there being an increase over the area of 1892 of 5 per cent.

In the northern division of the State the area is reported as 4 per cent. larger than last year, 12 per cent. larger in central Illinois, and 2 per cent. smaller in the southern division. It will be observed that the increase is principally in the counties where wheat suffered most, although the increase in oats is not in the same proportion as the decrease in wheat, as much wheat land will be planted to corn later in the season.

While the condition of oats is not up to a seasonable average, being but 90 per cent., it is 10 points better than at this date last year, and is 89, 90, and 91 per cent. in the northern, central and southern divisions of the State respectively.

BARLEY.

But eighteen counties report on this crop, of which seventeen are in the northern division, and the area is 94 per cent. and the condition 91 per cent.

In southern Illinois Randolph county reports but half as large an area as last year, and the condition is a fair average.

OLD CORN.

Although the corn crop of 1892 of 137,540,285 bushels was much below the average of this crop in this State, a larger proportion than usual remains in first hands on May 1.

In the northern division of the State 36 per cent. of the crop is reported in the hands of producers at this date, 28 per cent. in the central division and 24 per cent. in the southern, a State average of 32 per cent., or 43,599,187 bushels.

The following table gives the amount of "old corn" in the producers' hands May 1, the past fourteen years, as well as the extent of the crop produced each succeeding year.

Year Produced.	Crop in bushels.	Per ct. corn on hand following May.	Bushels corn in producers' hands following May.
1879	305,913,377	32+	99,229,889
1880	250,697,036	28+	71,929,343
1881	174,491,706	21+	37,445,964
1882	179,471,729	24+	43,450,857
1883	186,583,558	21+	39,478,621
1884	207,556,662	24+	50,102,264
1885	230,922,298	24+	57,047,027
1886	182,755,053	24+	43,346,028
1887	129,537,603	18+	23,573,279
1888	277,726,451	33+	92,584,238
1889	247,989,589	36	90,503,175
1890	164,512,020	20	32,653,868
1891	217,982,050	35	75,969,599
1892	137,540,285	32	45,599,187
Average	206,690,744	27	57,208,095

MEADOWS.

Very few counties in the State show an increased area in meadows this year. In the northern division of the State the area as compared with 1892 is 96 per cent., 92 per cent. in the central division and 102 per cent. in the southern division..

The condition of meadows is not very encouraging at this time. Old clover meadows did not stand the winter well, and in some cases new clover and timothy also suffered.

The May 1 condition in northern Illinois is 92 per cent. of a seasonable average, 89 per cent. in the central division and 94 per cent. in the southern.

PASTURES.

There is a decrease in the area of pastures as compared with 1892 of 4 per cent.

The condition of pastures is about the same as that of meadows, being 90 per cent. in the northern division, 88 in the central and 95 in the outhern.

Many farmers made the mistake of turning stock on pastures too early, before they had made a good start in growing, and while the ground was soft, and when the cool days of April came the evil results were made apparent. A little warm, bright weather will have a most favorable effect on both pastures and meadows, as there is no danger of their suffering from lack of moisture for some time.

In Knox county some insect has killed a great deal of the blue grass, in some cases several acres in a spot.

LIVE STOCK.

HORSES.

There are about the same number of horses in the State as at this time last year, and their condition is very good, 97 per cent. of an average. While they, as well as other farm animals, are somewhat thin in flesh, very little complaint of disease is reported.

In Bureau county many horses and colts have mange or itch, and a good many mares have dropped their colts.

Distemper is reported from the counties of Knox, Edwards, Jasper, Johnson, Calhoun, Grundy and Pulaski. In Clay county many colts have died and some mares, and abortion has been quite prevalent in Marion county. The cause is unknown. Some sickness among horses is reported from Macon county, and in Winnebago horses are dying from over-work or from bad feed.

MULES.

Mules are not quite so numerous as last year, there being a deficiency of 2 per cent. Their condition is generally good, the only disease noted among them being a few cases of distemper in Edwards county.

CATTLE.

There is a deficiency in the number of cattle on hand May 1, as compared with same date last year, of 10 per cent. But one county in the State, McHenry, reports a larger number than on May 1, 1892, and four—Whiteside, Jackson, Monroe and Randolph—an equal number. Their condition is 94 per cent. of a seasonable average.

DAIRY COWS.

The proportion of dairy cows is rather better than that of beef cattle, there being 96 per cent. of the number reported in 1892 on hand.

Abortion has occurred in the counties of Bureau, Coles and Marion. In Bureau county most of the farmers have lost at least one cow this spring.

The condition of cows at this date is 96 per cent. of a seasonable average.

HOGS.

Less than three-fourths as many hogs are reported this season as last, only 72 per cent.

In many counties this has been a hard season on young pigs and many have been lost. This trouble is especially noted in Carroll, Douglas, Fulton and Coles counties.

Hog cholera is reported from the counties of Edgar, Greene, Clark, Woodford, Pope and Saline, and in Winnebago county hogs have been affected with lung trouble.

Taking them the State over, however, their condition is but 3 per cent. below a seasonable average.

SHEEP.

About as many sheep (99 per cent.) are reported in this State as last year, and their condition is a seasonable average. No disease is reported among them.

BEES.

Bees did not winter well last season, and those that were left on summer stands were almost entirely destroyed.

Those taken into winter quarters fared better, but the season so far this spring has been hard upon them.

SPRING WORK.

While plowing is a little more advanced than last season at this time, work is still backward and farmers feel rather discouraged.

Oats, as a rule, were gotten in in good season, but the rains of April prevented plowing for corn, and in some localities, particularly in the bottom lands, it is doubtful when they can go to work in the fields.

Much of the wheat land was plowed up and seeded to oats, and the prospect is that much of it will be put in corn, so that, should the weather prove favorable, the area of corn is likely to be very large.

An increase of 10 per cent. in the area of broom corn is reported from Cumberland county.

With these exceptions the area of crops will not vary materially from last year.

FRUIT.

It is rather early to form much of an estimate on fruit. While many of the larger fruits bloomed profusely, the heavy rains did considerable damage by knocking the blossoms off the trees and by washing out the pollen.

Apples blossomed very sparingly, especially the standard varieties, and the indications are that we will have a poor apple crop for the third successive year.

WAGES PAID FARM HANDS.

Farm hands are more scarce than usual this year, all over the State, the greatest deficiency being in the northern division, and wages range a very little higher than in previous years.

Great difficulty is experienced by farmers in obtaining reliable, efficient help, and they are therefore badly handicapped in their work.

The average wages paid farm hands during the past fourteen years in the three grand divisions of the State are given in the following table.

DIVISION.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board.	Without board.
Northern	$1 00	$1 30	$19 80	$27 70
Central	85	1 10	17 95	24 80
Southern	65	90	14 60	20 75
Average	$0 85	$1 10	$17 45	$24 40

The wages paid farm help in the three divisions of the State, during the past fourteen years, is given in the following tables:

NORTHERN DIVISION.

YEAR.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board.	Without board.
1880	$0 95	$1 15	$17 55	$25 25

Average	$0 65	$0 90	$14 60	$20 75

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule, experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

ACREAGE AND CONDITION OF WINTER WHEAT—Continued.

ILLINOIS CROP REPORT,

—FOR—

JUNE 20, 1893

Synopsis of the Reports of Correspondents upon the Acreage and Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, June 20, 1893.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the twentieth of June.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large portion of the correspondents have been reporting to this Department for the past seventeen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

CORN

The outlook for corn is much more favorable than at this date last year, although the excessive rains have interfered very materially with planting in the southern division of the State; but it is hoped that with good corn weather for the remainder of the season a good crop will be obtained.

NORTHERN DIVISION.

In this section of the State, where 2,700,462 acres were planted in 1892, the area for 1893 is reported at two per cent. larger. But five counties in this division report a smaller area than last season. The condition of the crop in northern Illinois at this date is 97 per cent. of an average, which is 2 per cent. better than at this date in 1891, and 32 per cent. better than in 1892.

The quality of seed used was 8 per cent. below the average, the crop of last year being rather low in quality.

In Rock Island county grub worms are reported to be taking some fields of corn.

Corn was reported above ground May 1 in Lake and Warren counties, but most of it was not up until after the fifteenth of the month.

CENTRAL DIVISION.

The area as compared with last year in this section of the State where 1,834,571 acres was reported, is 5 per cent. larger. In Shelby county the area is 10 per cent. less than in 1892, and in Cumberland, Douglas and Sangamon 3 per cent. less. In all of the other counties in this division the area is as large or larger than last year.

While the June 20 condition is 23 per cent. better than in 1892, it is still 10 per cent. below a seasonable average.

The quality of the seed is but 91 per cent. as compared with an average.

Cut worms have done some damage to corn in Schuyler and Scott counties.

In Mason county corn appeared above ground April 17.

SOUTHERN DIVISION.

The most discouraging reports on corn, both as to area and condition, come from this section of the State, where the area is 7 per cent. less than last year, when 653,399 acres were reported.

The condition of the crop, 78 per cent., is 3 points higher than on June 20, 1892

The seed used in Southern Illinois was much superior to that in the other divisions of the State, and of nearly average quality, and with this advantage seasonable weather may improve the prospects of corn in this section.

There has been too much rain for corn in Franklin county and it is beginning to turn yellow.

Both cut worms and army worms have injured corn in Jasper county.

In Union county corn was reported in sight on April 1.

BROOM CORN.

The area devoted to broom corn in Illinois this season is 4 per cent. less than in 1892, when there was 18,333 acres planted. Colcs, Cumberland and Douglas countiess how a slightly in- creased area over last year, and a few counties report a deficiency, while in about half the counties in which the crop is grown there is no material change from 1892.

The condition of the crop is 95 per cent. of an average in the northern division of the State, 91 per cent. in the central, and 66 per cent. in the southern division

SORGHUM.

Sorghum is raised to some extent in a much larger number of counties than is broom corn.

The area this year is 10 per cent. less than in 1892 in both the northern and central divisions of the State, and 12 per cent. less in the southern division.

The most encouraging condition of the crop is reported in northern Illinois, where it is 90 per cent. of a seasonable average, 82 per cent. in the central and 84 per cent. in the southern division of the State.

WINTER WHEAT.

In both northern and central Illinois the condition or this crop has improved two per cent. since May 1, but it has deteriorated 3 per cent. in southern Illinois since that date. In the northern division of the State the condition is 74 per cent. of an average, 63 per cent. in the central and 80 per cent. in the southern division.

Army worms did some damage to winter wheat in Calhoun and Effingham counties, and Hessian fly is reported from Alexander, Jersey and Perry counties, and cut worms in Clinton county.

Smut or rust is reported from the counties of Gallatin, Pulaski, Saline, Union and White.

A little cheat is reported from Franklin county.

Wheat harvest has just commenced in southern Illinois, the earliest date mentioned being June 14 in Alexander county, so that it is impossible to form an estimate of the yield per acre.

SPRING WHEAT.

The area, as reported by crop correspondents, is 10 per cent. less than last year in the northern division of the State, and the condition 89 per cent. of an average.

No report on spring wheat was made from either central or southern Illinois.

OATS.

There is a larger area in oats than last year, when 2,698,893 acres were sown, by 5 per cent., being 4 per cent. larger than in 1892 in northern Illinois, and 12 per cent. larger in the central division, while the area in southern Illinois is two per cent. less.

The condition of the crop has improved 9, 10 and 11 per cent in the southern, central and northern grand divisions respectively, and the June 20 condition is encouraging for a full average yield per acre.

No injury to oats by insects is reported, but in Knox county they are said to look a little sickly for some reason

In some localities lodging is feared but none has been reported.

On the whole the outlook for oats is the most encouraging for several years.

RYE.

The condition of rye has improved a little in each division of the State since May 1, though there are a few counties where the condition is not so good as on that date.

The June 20 condition is 83 per cent. of an average in northern Illinois, 89 per cent. in central and 93 per cent. in the southern division of the State.

BARLEY.

The area in barley this year is 6 per cent. smaller in the northern division than in 1892, and 50 per cent. less in the southern division. No barley is reported from central Illinois.

The condition of the crop is 94 per cent. of an average in the northern division and 50 per cent. in the southern.

MEADOWS

The area in meadows this year is 5 per cent. less than in 1892. In the northern division the area is 3 per cent. less than last year, 8 per cent. less in the central and 4 per cent. less in the southern division.

The condition of meadows is 6 per cent. better than on May 1 in northern Illinois, but 6 per cent. poorer in the central and 20 per cent. poorer in the southern division than on that date. This depreciation is largely caused by the army worm which has committed great depredations in some portions of the State.

Its ravages are especially mentioned in the following counties, viz: Calhoun, Christian, Coles, Cumberland, Douglas, Green, Bond, Montgomery, Hamilton, Jasper, Lawrence, Madison, Marion, Vermilion, Randolph, Richland, Saline, St. Clair, Washington, Wayne, White, Williamson, Clay, Clinton, Crawford, Effingham and Fayette The worst condition exists in Jasper county, where the condition is but 23 per cent. of an average. In Shelby county the June 20 condition is but 25 per cent., but it is not attributed to army worm. In Franklin county the cut worm has injured meadows to some extent, and the grub worm has hurt them in Knox county.

CLOVER.

The area in clover this year is but 88 per cent. as compared with 1892. In the northern division of the State it is 89 per cent., in the central 79 and in the southern division 95 per cent.

The condition of the crop is 95 per cent. of an average in the northern division, 85 per cent. in the central and 91 per cent. in the southern portion of the State.

HUNGARIAN AND MILLET.

There is quite a reduction in the area of these crops in the northern grand division of the State, there being but 89 per cent. as compared with last year.

In the central portion of the State the area is 1 per cent. less and in the southern division 3 per cent. less than in 1892.

PASTURES.

Pastures have nearly as large an area as in 1892, there being a deficiency of but two per cent.

In the northern and central divisions of the State the condition of pastures has improved a few points since May 1, and in the northern division is nearly a seasonable average, but in southern Illinois the June 20 condition is 4 per cent. less than six weeks ago.

While the army worm has done a great deal of injury to pastures, they have not suffered so much from this cause as meadows have.

This pest is reported in Clark, Coles, Green, Bond, Effingham, Hamilton, Jasper and Saline counties, while in Franklin county the cut worm has damaged pastures to some extent.

IRISH POTATOES.

The area in Irish potatoes this season is 2 per cent. larger than in 1892, and the condition is much better than at this date last year, especially in the northern and central divisions of the State, where the June 20 condition is reported as 102 and 100 per cent. of a seasonable average. In the southern division of the State, the condition is but 91 per cent. of an average.

The present prospect is that the potato crop of Illinois, which has been rather short for the last three years, will assume something like its normal proportions this year.

SWEET POTATOES.

The area in sweet potatoes this year is 6 per cent. less than in 1892, and their condition is 93 per cent. of a seasonable average.

FLAX.

Flax is not a popular crop in Illinois and receives less attention each year. This year the area is but 81 per cent. as compared with 1892.

The June 20 condition of the crop is 98 per cent. of an average.

TOBACCO.

In three counties in the northern division of the State the area in tobacco is the same as in 1892, while in the other two counties in this section from which the crop is reported, the area is 72 and 80 per cent. respectively, making the area for the division 90 per cent. as compared with last year. In the central division of the State the area is 20 per cent. less than last year, and in the southern division 4 per cent. smaller.

The June 20 condition of the crop is a seasonable average in the northern division, 65 per cent. of an average in the central and 87 per cent. in the southern portion of the State.

FIELD BEANS.

A slightly smaller area is devoted to field beans this year than last, the area in northern Illinois being 98 per cent. as compared with 1892, 100 per cent. in the central division and 95 per cent. in the southern.

In both the northern and central divisions of the State the condition is within one point of a seasonable average, while in the southern division it is 9 points off.

FIELD PEAS.

In both the northern and southern divisions of the State, field peas show a slightly increased area over 1892, being 2 per cent. higher.

The principal increase is in Kendall county, where the area is 50 per cent. larger than last year, and in Randolph is twice as large.

The area of the crop in central Illinois is the same as in 1892.

FRUITS.

The outlook for fruit this season is very discouraging. There will be very few apples, and so far as reported an average crop of fruit of no kind is expected.

CHERRIES.

Less than half a crop of cherries was obtained this year. The yield in northern Illinois was a little better than in other portions of the State, two counties, Boone and McHenry, reporting an average yield, and the division averaging 48 per cent., while in central and southern Illinois the yield was 42 and 45 per cent. respectively.

STRAWBERRIES.

In the northern division of the State the yield of strawberries was 86 per cent. of an average, but in the central and southern divisions, where excessive rains fell, the yield was but 57 and 52 per cent. of an average. Strawberries were a total failure in Shelby county.

RASPBERRIES.

A few counties in northern Illinois report the yield of this fruit as being a little larger than usual, but so many more report a smaller yield that the average for the entire division is but 88 per cent.

In central Illinois DeWitt county reports an increase of 5 per cent. and Vermilion 10 per cent., but the yield for the division is but 78 per cent. of an average.

In the southern division the yield was even smaller, being but 72 per cent.

GOOSEBERRIES.

But two-thirds of an average yield of gooseberries was produced this season, there being 74 per cent. of an average yield in the northern division, 63 in the central and 60 per cent. in the southern division.

CURRANTS.

Currants yielded but 1 per cent. better than gooseberries this year, (67 per cent.), but the yield was differently distributed, that of northern Illinois being 75 per cent. of an average, 62 per cent. in the central division, and 65 per cent. in the southern. In Effingham county the yield was 12 per cent. larger than usual.

VINEYARDS.

A very slight reduction in the area of vineyards is reported this season, only 3 per cent. in the entire State.

The June 20 condition is encouraging for 90 per cent. of an average crop, the condition in northern Illinois being 95 per cent., 92 in the central and 83 in the southern division.

I nPulaski county grapes have rotted badly, those sprayed being as much affected as those not so treated.

YOUNG LIVE STOCK.

PIGS.

The number of young pigs this season is quite small, being but 81 per cent. of an average. In the following counties there are a few more than usual, as noted: Shelby, 10 per cent.; Tazewell, 3; Jefferson, 12; Massac, 3; Perry, 17; Pulaski, 5; Washington, 3 and Williamson, 12 per cent.

The condition of pigs is excellent, 97 per cent. of an average, and no reports of disease among them.

LAMBS.

Lambs are less in number than usual by 4 per cent., and their condition is nearly a full average.

CALVES.

The number of calves this season is 4 per cent. below an average in northern Illinois, 10 per cent. less in central and 5 per cent. less in southern Illinois.

Their condition is nearly an average, 98 per cent. The only report of disease among them is from Marion county, where there is said to be great mortality among calves and their dams, so great as to be almost epidemic in some localities.

COLTS.

With the exception of pigs, there are fewer colts in the State this year than any other class of young live stock, there being but 89 per cent. of an average.

In Mason county there has been great mortality among colts a few days old, and also in Marion county, where the dams have also died. Otherwise the condition of colts is excellent.

The value of colts at weaning time is placed at $31 in the northern division, $32 in the central and $36 in southern Illinois.

About 7 per cent. of the colts die before weaning time.

The average cost of service of stallions is $11 in northern and central Illinois, and $9 in the southern portion of the State.

TILE DRAINAGE.

The experience of our farmers last season, followed by a wet spring again this year, has resulted in a "boom" for tile drainage, and farmers in the northern and centra divisions of the State have generally put in all the tile they could afford or obtain. Tile factories have been run to their utmost capacity and in many instances were unable to supply the demand.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule, experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

ILLINOIS CROP REPORT,

—FOR—

AUGUST 1, 1893.

Synopsis of the Reports of Correspondents Upon the Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, August 1, 1893.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of August.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large number of the correspondents have been reporting to this Department for the past seventeen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

It is greatly to be regretted that the farmers of Illinois hold such erroneous views in regard to the agricultural statistics, which assessors are required by law to collect and return to the Auditor of Public Accounts.

So long, however, as they continue to make such meagre returns, or none at all, they cannot object to this Department using the most correct data obtainable, and in the counties where only incomplete returns have been made, we have used the average reports for a term of years, believing these to be nearer the truth than can otherwise be obtained.

WHEAT.

Of the 2,065,144 acres seeded to wheat this season, 21 per cent. was winter-killed, or otherwise destroyed, leaving but 1,630,797 acres for harvest.

The greatest loss occurred in central Illinois, where the area destroyed was 37 per cent., while in southern Illinois but 7 per cent. of the area seeded was plowed up.

The average yield per acre for the State was 12 bushels making a total yield of 18,916,314 bushels, the smallest wheat crop harvested in this State, since 1860, with the exception of 1885.

The price obtained per bushel, 48 cents, is the lowest ever reached in the State, and the total value of the entire wheat product of the State, at the ruling prices August 1, was but $9,157,708.

The following table gives the area, yield and value of the wheat crop of the State during the last thirty-four years:

WHEAT—(Spring and Winter.)

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860.....	2,109,471	11.3	23,837,023	$0 85	$20,261,469	$ 9 60	$10 55	$22,254,919		$1,993,450

†1890-1881 estimated same as reported for 1880.

The quality of the berry, as a rule, is very poor, and in a few counties it is reported as not salable for flour at any price. A great deal of it will not grade over No. 3. Rust or smut injured the quality of the wheat in the counties of Lee, Calhoun, Edwards, Hardin, Madison, Williamson, Massac, Pope and Saline. In Hardin county wheat was also affected by scab. Chinch bugs injured spring wheat in Lake county.

Of the 2,065,144 acres seeded, 2,027,766 acres was winter wheat and 37,378 acres spring wheat, while 18,406,268 bushels of winter wheat was harvested and 510,046 bushels of spring wheat.

WHEAT RAISED AND CONSUMED.

It is very rarely that Illinois produces so small a surplus of wheat over that needed for seed and consumption as this year. Allowing 1½ bushels per acre, on the same area as this year, and 4 bushels per capita for our population, we would have but 891,488 bushels surplus.

OATS.

While the area in oats this year, 3,352,375 acres is 653,482 acres larger than in 1892, and the average yield per acre of 31 bushels, brings the product up to 105,916,595 bushels, the low price prevailing this season, 22 cents per bushel, has reduced the value of the crop to the producer, who received but $22,985,087.

The largest yield per acre was in the central grand division of the State, where 34 bushels per acre was harvested, but the grain brought but 20 cents per bushel. Oats were very seriously damaged by rust in the counties of DeKalb, Grundy, Henry, LaSalle, Lee, Marshall, Mercer, Warren, Whiteside, Fulton, Edwards, Marion, Williamson, Boone, Carroll, Ogle, Pike, Johnson, Massac, Monroe, Randolph and Wayne, causing the grain to shrink and weigh unusually light.

Oats were also injured by army worms in Cook and DeKalb counties, and by chinch bugs in Carroll and Wayne counties.

The following table gives the area, yield and value of the oat crop of the State during the past thirty-four years:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.

†1860–1881 estimated same as reported for 1880.

A table published elsewhere in this report gives the area, yield and value of the oat crop in each county in the State this year.

RYE.

There has been a decrease in the area of rye sown for the last two years, the 1893 area being but 124,857 acres.

The average yield per acre of 14 bushels is as large as last year, but for the first time since 1869 the rye product of the State amounted to less than two million bushels, there being but 1,734,398 bushels harvested.

The prevailing price on August 1 was 42 cents per bushel making the total value of the crop $734,594.

The following table gives the area, yield and value of the past thirty-four rye crops grown in the State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	59,455	16	951,281	$0 49	$466,127	$7 87	$9 80	$582,659		$116,532

†1860–1881 estimated same as reported for 1880.

A table published elsewhere in this report gives the area, yield and value of rye in each county in the State.

BARLEY.

The area devoted to barley this season, 19,916 acres, is 3,445 acres less than the area of 1892, and the average yield per acre of 19 bushels is the smallest yield of barley ever known in Illinois, with the exception of the years 1874, 1876, 1877 and 1887. The total yield of barley this year was 390,035 bushels, for which the price on August 1 was 35 cents per bushel, and the total value of the crop $135,422.

Excepting seventeen thousand bushels in the central and southern grand divisions of the State, the entire amount of barley was produced in northern Illinois.

The following table gives the area, yield and value of the past thirty-four barley crops produced in this State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	45,058	23	1,036,334	$0 49	$507,803	$11 26	$10 55	$475,362	$32,441

†1860–1881 estimated same as reported for 1880.

In a table published elsewhere in this report will be found the area, yield and value of the barley crop of the State by counties.

HAY.

The area in meadows this season, 2,788,903 acres, is the largest reported since 1889. The yield per acre of 1.3 tons is not quite so large as on some years past, and the total hay crop is somewhat smaller than in 1892.

The price per ton, $7.20, is $1 per ton higher than last year, and the value of the hay crop to the producer at the ruling price August 1, $26,079,671, is over $2,250,000 more than last year.

The hot, dry weather at harvest was just what was needed, and enabled farmers to get in their crop in fine condition and of excellent quality.

Meadows were injured to some extent by the army worm in Calhoun, Clark, Cook, Bond, Madison, Williamson and Effingham counties.

The following table gives the area, yield and value of the past thirty-four hay crops of the State:

Year.	Number of acres.	Average yield per acre—tons.	Tons produced.	Price per ton.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.

†1860-1881 estimated same as reported for 1880.

The area, yield and value of the hay crop of 1893 for each county in the State is given in a table published elsewhere in this report.

FLAX.

The area devoted to flax this season, 2,449 acres, is 726 acres larger than that of 1892.

The average yield of seed per acre was 8 bushels, and the total yield 19,667 bushels, for which the prevailing price August 1 was 98 cents per bushel. Had the entire crop been sold at this price, it would have returned to the producer $19,297.

The following table gives the area, yield and value of the last fifteen crops of flax grown in the State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1879	110,016	9 00	990,437	$1 30	$1,296,753	$11 78

A table published elsewhere in this report gives the area, yield and value of flax seed in each county in which it is raised.

CORN.

Nearly three-fourths of a million (725,677) more acres of corn were planted this spring than last. This increase was largely caused by the comparative failure of the wheat crop, many wheat fields having been plowed up early in the season and corn planted.

The rains in May and June interfered very materially with corn planting and much of it was planted late. Since the middle of June it has been exceedingly dry in most portions of the State and corn has suffered severely. In some localities its growth was stopped and in consequence it was tasseling out very short, and many stalks had no ears. The crop was reported as "firing" in Bureau, Kankakee, Livingston, Marshall, Mercer, Putnam, Stark, Stephenson, Warren, Whiteside, Clark, Kendall, McLean, Knox, Henderson and Henry counties. In DeKalb county some fields are reported as damaged by rain, and in Morgan, corn was badly lodged by the storm of July 23. A grub is working at the roots of corn in the counties of Bureau and Mason, while chinch bugs have commenced their depredations in Bond, Clinton, Fayette, Jasper, Washington, Marion and Randolph counties, in the southern division of the State.

The August 1 condition of the crop is better than on the same date last year in the northern and central divisions of the State, but 8 points poorer in the southern division. In northern Illinois it is 83 per cent. of a seasonable average, 81 in central and 75 per cent. in southern Illinois.

A table published elsewhere in this report gives the area of corn in each county in the State in 1892 and 1893, and also the August 1 condition for eleven years.

BROOM CORN.

Broom corn is raised in about one-fourth of the counties in the State, and the general average condition is 84 per cent.

In northern Illinois the August 1 condition of the crop is 89 per cent, of an average, in central Illinois 83 per cent. and in southern Illinois 84 per cent.

SORGHUM.

Some attention is paid to this crop in over half (62) the counties in the State, and its August 1 condition is 82 per cent. of a seasonable average. This is three points below the condition reported on June 20, the drought having injured it slightly.

PASTURES.

The condition of pastures at this date is very discouraging, being but 67 per cent. of an average in both the northern and central divisions of the State, and 77 per cent. in the southern division. But six out of the hundred and two counties in the State are in average condition for this season.

Almost every county reports pastures as very poor, and in the following counties farmers are already obliged to feed stock, viz: DeKalb, Kendall, Livingston, Putnam, Stark, Will, Macon, McLean and Piatt. In counties where stock is still on pasture, they might almost as well be eating hay, the grass is so dry. In Piatt county some creameries have closed or are running on short time on account of lack of pasture. In Sangamon county pastures are badly eaten by grasshoppers, and in Crawford county by army worms.

IRISH POTATOES.

There has been a very discouraging change in the condition of Irish potatoes since our last report, June 20, and the prospect now is for but three-fourths of an average yield per acre.

In the northern grand division of the State, where over half the potato crop of the State is raised, its condition has fallen off 35 points in the last six weeks and is now but 67 per cent. of a seasonable average.

In central Illinois the August 1 condition of the crop is 76 per cent. and in southern Illinois 80 per cent. of an average.

Potato bugs are reported from Kane county.

SWEET POTATOES.

Although not extensively raised in this State, the sweet potato crop receives some attention and at this date its condition is more encouraging than that of Irish potatoes, being 76 per cent. in northern Illinois, 82 in central and 88 in southern Illinois. They have depreciated in condition 11 points since June 20.

BUCKWHEAT.

The area devoted to buckwheat this year is reported as 17 per cent. less than in 1892 when 3,279 acres were planted. The August 1 condition of the crop promises but three-fourths of an average yield per acre. The condition is more favorable in the southern division of the State, where it is reported as 81 per cent. of an average, while it is but 78 and 67 per cent. in the northern and central divisions of the State, respectively.

TURNIPS.

The area in turnips and other root crops this season is somewhat reduced as compared with 1892, being but 87 per cent. of last year's area.

The August 1 condition of the crop is 66, 72 and 78 per cent. of a seasonable average in the northern, central and southern divisions of the State, in the order named.

TOBACCO.

The most favorable reports on this crop come from the northern portion of the State, where its condition is given as 88 per cent. of an average. In central Illinois the condition is 79 and in southern Illinois 87 per cent. of a seasonable average.

CASTOR BEANS.

In the northern division of the State the August 1 condition of castor beans is but 65 per cent. of an average, but is 75 per cent. in the central division and 88 per cent. of an average in southern Illinois, where nearly one-half of the crop is raised.

FIELD BEANS.

The August 1 condition of field beans is encouraging for 80 per cent. of an average yield per acre in northern Illinois, 78 per cent. in central and 85 per cent. in the southern division of the State.

FIELD PEAS.

While 87 and 88 per cent. of an average yield of field peas is expected in the northern and central divisions of the State, the August 1 condition is favorable for but 36 per cent. of an average yield in southern Illinois.

Neither beans nor peas receive much attention as field crops in this State.

FRUIT.

APPLES.

Orchardists in Illinois thought in 1892 that bed-rock had been reached so far as apple were concerned, but the prospect this season is even more discouraging than a year ago. The present outlook is for but 23 per cent. of a crop in northern Illinois, 10 per cent. in central and 31 per cent. in the southern division of the State.

The most encouraging report is from Alexander county, where 85 per cent. of a crop is expected, and 75 per cent. in Johnson and Pope counties. Several counties in central Illinois report apples a complete failure, and in many the condition and quantity is so poor that it is practically a failure.

PEACHES.

The condition of peaches in northern Illinois at this date is the same as apples, 23 per cent. of a seasonable average; in central Illinois the August 1 condition is 24 per cent. and in the southern division of the State, 63 per cent.

PEARS.

Although the outlook for pears is very poor in some localities, and there will be none at all in others, the present prospect is for 31 per cent. of a crop in northern Illinois, 27 per cent. in central and 61 per cent. in the southern division of the State.

PLUMS.

In the northern division of the State the plum crop promises to be 41 per cent. of an average, 21 per cent. in the central and 42 per cent. in the southern division.

GRAPES.

The grape crop is the most promising of any fruit this year, and over three-fourths of an average crop is anticipated. In the northern division of the State the August 1 condition is encouraging for 88 per cent. of an average yield, 86 per cent. in the central and 64 per cent. in the southern division. In Hancock county rot has attacked the grapes.

BLACKBERRIES.

Blackberries promised to be plentiful early in the season, but the drouth commenced just at the critical season in their growth and the crop was cut short, so that but little more than half a crop was saved. They were more plentiful in the northern division than in any other portions of the State, where 59 per cent. of an average yield was obtained; in central Illinois there was 46 per cent. of an average crop and in southern Illinois 49 per cent.

QUINCES.

Quinces will be almost a total failure in northern Illinois. In the central division of the State about one-fourth, and in the southern division one-half a crop is expected.

LIVE STOCK.

On account of the drouth, stock is rather thin in flesh, but excepting cattle there is not much sickness among them.

In Peoria county there have been a few cases of distemper among horses, and in Marshall county they have pink-eye very badly.

The pig crop is reported short in DeKalb county and hog cholera is prevalent in Cass, Saline and White counties, in the last named in its worst form. There has also been several cases of lock-jaw among stock in Saline county.

Flies have been very annoying to cattle this summer, and are specially noted in the counties of Henry, Knox, Winnebago, Clark, Coles, Hancock, Menard, Morgan, Bond, Edwards, Hamilton and Wayne. Both the common fly and horn fly are mentioned by our correspondents as bothering stock.

Cattle in Edwards, Wayne, Hamilton and some of the adjoining counties have been dying from what was first thought to have been the bites of poisonous flies, and other stock was also affected in the same way, especially such as ate the flesh of the dead animals, but an examination of the animals and their surroundings by the State Board of Live Stock Commissioners has developed the fact that the stock is suffering from malignant anthrax.

A full report of the epidemic will soon be published by the Board of Live Stock Commissioners.

DRAIN TILE.

During the year 1892, 30,476,116 feet of drain tile were laid in Illinois, of which 20,577,387 feet were in northern Illinois, 9,805,457 feet in central and 113,272 in southern Illinois.

The average number of feet laid to each cultivated acre is 22, there being 29 feet per acre in the northern division of the State, 27 in the central and 1 in the southern.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

ILLINOIS CROP REPORT.

—FOR—

DECEMBER 1, 1893

Synopsis of the Reports of Correspondents Upon the Yield of the Principal Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, December 1, 1893.

The information contained in this report as to acreage of crops and number of head of live stock was obtained from the reports of assessors made to this Department as required by law.

The data in regard to yield per acre, price of crops and value of crops and live stock was obtained from crop correspondents, who number nearly six hundred, and represent every section of the State.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large number of the correspondents have been reporting to this Department for the past seventeen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER GRAIN.

WHEAT

There is a decrease in the area seeded to this cereal last fall as compared with 1892 of 10 per cent. In the northern division of the State, where 82,196 acres was seeded last year, there is a deficiency of 27 per cent. or 22,298 acres; in the central division the de-

ficiency is 15 per cent. or 141,932 acres, making the area seeded 790,444 acres. In the greatest wheat-growing division of the State, the southern, the decrease is but 4 per cent. and the area seeded is 971,085 acres.

The total area seeded last fall was 2,029,000 acres. The deficiency in area is attributable to two causes, one the low price which has ruled during the past few months, and the other the dry season which rendered it difficult to prepare the ground properly for seeding. In two or three counties correspondents report that the disc harrow was used in preparing the ground this season, with favorable results so far, and it is thought that in a dry season like the present it will prove a very desirable innovation.

The condition of the crop on December 1 was not so favorable as was to be desired. The lack of moisture in the ground made the seed very slow in germinating and its growth was also retarded from this cause, so that as a rule the plant is small and not very strong, and therefore not in first class condition to go into winter quarters.

A full seasonable condition of wheat is reported in the counties of Cook, DeKalb, Kankakee, Lee, McHenry, Stark, Whiteside, Brown, Edgar, Logan, Vermilion, Edwards, Johnson, Monroe, Perry, Pulaski, Saline and Union.

Damage done to wheat by insects will be treated elsewhere in this report.

The December 1 condition of the crop is 87 per cent. of an average in the northern division of the State, 81 per cent. in the central and 89 per cent. in the southern division.

RYE.

The area of the 1894 rye crop, 109,076 acres, is 11 per cent. less than a year ago when 122,601 acres were reported.

The condition of the crop December 1 was 87 per cent. of an average in the northern division of the State, 82 per cent. in the central and 75 per cent. in the southern division.

CORN.

The area planted last spring, 6,416,488 acres, was 1,228,056 acres larger than the area reported in 1892. The largest area planted was in the northern division of the State, where 2,842,838 acres was reported. In the central division the area planted was 2,624,416 acres and in the southern division 949,234 acres.

Notwithstanding the adverse circumstances attending the planting, cultivation and growth of corn during the past season, the average yield per acre of 26 bushels is as large as last year, and with the increased area makes the total yield nearly thirty millions of bushels larger than in 1892, when the corn crop amounted to 137,540,285 bushels.

The total corn crop of the State for 1893 is 167,687,971 bushels. In the northern division of the State the yield was 26 bushels per acre, and the crop 75,205,509 bushels; in central Illinois 27 bushels per acre was the average yield and 72,458,456 bushels the product, while in the southern portion of the State but 21 bushels per acre was obtained, making a crop of 20,024,006 bushels.

The quality of corn is very good this season in view of the drought which prevailed during the summer, and is 91 per cent. of an average. The best corn is in northern Illinois, where it lacks but 2 points of being of average quality; in the central division it is 7 points short and in the southern portion of the State it is but 81 per cent. of an average.

The dry fall was favorable for ripening the crop, and but few cases are reported where it was at all injured by frost, but as a rule it is rather light in weight and chaffy, and in a number of counties soft. The soft corn is more prevalent in southern Illinois than in the other grand divisions of the State.

For injury to corn by insects, see elsewhere in this report.

A lower price of corn has prevailed this season than for a number of years past, the average price being but 30 cents per bushel, but the total value of the crop, had all of it been sold at December 1 prices, would have been $51,099,698.

A table published elsewhere in this report gives by counties the area, yield and value of the corn crop for the current year.

The area, yield and value of the corn crop of the State for the past thirty-four years, is given in the following table:

YEAR.	Number of acres.	Average yield per acre.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production	Profit.	Loss.
1860	3,839,159	30	115,174,770	42½	$48,944,277	$12 74	$10 50	$40,311,169	$8,633,108	
1861	3,839,159	30	115,174,770	24	27,641,944	7 00	10 50	40,311,169		$12,669,225

BROOM CORN.

Although the area and the yield per acre of broom corn the past season were larger than in 1892, the low prices prevailing made the value of the crop less than for a number of years past. But $57 per ton was obtained, and the crop returned to the producer $501,678.

As in previous years almost the entire crop was raised in central Illinois and in the counties of Coles, Douglas and Edgar. In northern Illinois Henry county devotes quite a large area to the cultivation of this crop.

The total area in 1893 was 27,358 acres, and the average yield per acre 646 pounds. The total crop was 17,668,000 pounds.

The following table gives the area, yield and value of the broom corn crop of Illinois since 1876:

YEAR.	Acreage.	Av. yield per acre—lbs.	Total yield—lbs.	Price per ton.	Value of crop.
1877	14,566	458	6,674,747	$71 20	$237,594
1878	18,258	614	11,218,168	49 50	277,645
1879	17,664	632	11,161,238	86 75	484,195
1880	18,652	775	14,457,156	77 40	559,447
1881	17,887	1,437	25,708,250	128 50	1,651,739
1882	43,036	225	9,693,187	80 00	387,680
1883	33,922	1,000	33,922,000	90 00	1,481,710
1884	25,173	750	16,228,000	72 00	585,572
1885	17,382	666	10,514,000	94 00	434,932
1886	37,633	526	19,914,030	78 00	776,963
1887	35,022	803	28,132,090	69 00	973,864
1888	41,807	672	28,116,000	57 00	797,245
1889	29,393	563	16,546,000	68 00	567,053
1890	27,591	1,020	28,152,000	64 00	904,311
1891	15,875	576	9,138,000	117 00	532,985
1892	18,333	587	10,756,000	94 00	508,699
1893	27,358	646	17,668,009	57 00	501,67[illegible]

SORGHUM.

There was quite a revival of interest in this crop this year, especially in southern Illinois where nearly two-thirds of the entire area reported was planted. In northern Illinois but 714 acres were planted, 2,876 acres in central Illinois and 6,124 acres in the southern division, making a total of 9,714 acres.

The average yield per acre of 68 gallons is below the average of the last few years, but the total product of 660,629 gallons has not been exceeded since 1890.

The price per gallon, 43 cents, is a fair average, and the total value to the producer of this crop was $283,519.

The following table gives the area, yield and value of the sorghum crops produced in the State since 1876:

YEAR.	Acreage.	Av. yield per acre—gals.	Total number of gals.	Price per gal.	Value of crop.
1877	19,335	63	1,237,164	$0 42	$515,409
1878	14,638	80	1,174,549	45	528,547
1879	17,883	73	1,309,490	38	497,572
1880	9,825	65	636,216	42	267,211
1881	8,263	55	456,714	55	251,193
1882	13,757	61	816,892	50	408,446
1883	14,023	90	1,272,287	50	604,157
1884	13,854	100	1,389,243	45	631,270
1885	13,890	92	1,289,426	40	519,622
1886	12,637	81	1,021,855	38	393,497
1887	11,231	60	673,736	46	309,098
1888	11,447	101	1,169,474	37	429,120
1889	10,352	93	966,097	37	353,883
1890	8,712	87	758,944	43	326,720
1891	6,980	90	629,709	41	256,909
1892	4,483	71	318,323	46	146,103
1893	9,714	68	660,629	43	283,519

BUCKWHEAT.

A somewhat larger area than in 1892 was devoted to buckwheat in 1893, when the assessors reported 3,541 acres, but the yield per acre of 13 bushels was unusually small and the entire crop amounted to but 48,000 bushels.

The total value of the crop was $29,344, the average price per bushel being 61 cents.

The following table gives the area, yield and value of the buckwheat crop in this State for the past seventeen years:

YEAR.	Acreage.	Av. yield per acre.	Bushels produced.	Price per bushel.	Value of crop.
1877	15,880	13	207,696	$0 73	$151,612
1878	16,060	9	155,340	1 33	206,608
1879	10,786	10	112,180	77	85,257
1880	6,681	9	62,128	77	47,838
1881	8,648	4½	16,374	1 12	18,329
1882	2,469	25	63,743	77	49,838
1883	3,491	14	49,397	85	41,800
1884	3,526	17	58,641	64	37,864
1885	4,318	15	66,874	64	43,174
1886	4,830	13	64,136	56	36,256
1887	3,051	11	33,584	65	21,832
1888	2,193	16	35,752	65	23,350
1889	3,906	15	57,578	53	30,415
1890	3,080	15	47,707	60	28,536
1891	2,054	18	36,881	69	25,539
1892	3,279	19	63,305	57	36,406
1893	3,541	13	48,000	61	29,344

TIMOTHY SEED.

Almost the same quantity of timothy seed was raised this year as last, 113,566 bushels, but the price per bushel, $1.85, is the highest obtained since 1887, and the total value of the product, $211,390, is greater than that obtained for two years past.

A table giving the yield and price of timothy seed in each county in the State is given elsewhere in this report.

The following table gives the amount and value of the crop in the State since and including 1877:

YEAR.	Bushels. produced.	Price per bushel.	Total value.
1877	483,571	$1 25	$604,464
1878	261,559	1 25	326,949
1879	213,329	2 25	479,990
1880	400,124	2 20	880,272
1881	426,531	2 60	1,108,980
1882	320,653	1 68	538,697
1883	358,895	1 35	476,447
1884	389,056	1 30	512,438
1885	167,456	1 55	258,376
1886	179,178	1 65	294,803
1887	139,561	2 25	311,421
1888	134,006	1 70	224,651
1889	323,763	1 35	434,300
1890	182,635	1 25	232,277
1891	170,181	1 20	208,069
1892	113,675	1 70	192,676
1893	113,566	1 85	211,390

CLOVER SEED.

There was 107,829 bushels of clover seed produced in 1893, an increase of 70 per cent. over the 1892 crop. It is hoped that more attention will be paid to this crop than during the past two years and its figures will reach those of past years.

Although the price per bushel, $5.30, is 75 cents less than that of last year, it was the highest ever reported, with that exception, and the value of the crop was $572,608.

A table published elsewhere in this report gives the number of bushels of clover seed produced in Illinois in 1893, together with the value of the crop.

In the following table will be found the yield and value of the crop of clover seed for 1893, as well as for the sixteen years preceding:

YEAR.	Bushels produced.	Price per bushel.	Total value.
1877	64,686	$4 80	$310,493
1878	77,388	4 05	313,421
1879	138,191	5 00	690,955
1880	87,144	4 60	400,862
1881	125,042	5 20	650,218
1882	55,862	5 00	279,310
1883	78,656	4 75	375,[illegible]
1884	138,920	4 40	609,945
1885	72,969	5 00	365,523
1886	122,612	4 30	524,271
1887	180,267	4 15	747,982
1888	122,906	4 60	563,412
1889	78,005	3 15	245,695
1890	191,596	3 80	729,638
1891	74,729	4 05	303,756
1892	62,931	6 05	382,045
1893	107,829	5 30	572,608

HUNGARIAN AND MILLET SEED.

Less interest is taken in these seeds each succeeding year, and the 1893 crop amounted to but 20,448 bushels.

The price per bushel, 78 cents, is the highest ever obtained in this State, with one exception, and the total value of the crop was $16,053, rather more than was obtained last year.

The following table gives the yield and value of this crop since 1876:

YEAR.	Bushels produced.	Price per bushel.	Total value.
1877	17,463	$0 65	$10,701
1878	26,787	55	14,733
1879	43,776	75	32,832
1880	66,889	70	46,752
1881	76,180	95	72,370
1882	77,423	60	53,422
1883	70,007	62	43,201
1884	33,513	51	17,187
1885	22,203	60	13,418
1886	32,175	54	17,553
1887	39,049	65	25,385
1888	55,388	63	35,126
1889	154,468	49	75,944
1890	39,188	63	24,668
1891	34,258	67	22,904
1892	21,993	66	14,627
1893	20,448	78	16,053

BEANS.

Twice as large an area as last year was devoted to beans this season, the area being 1,708 acres. This is the largest area planted to this crop since 1889.

The yield per acre of 12 bushels is somewhat below the average. The total yield was 20,621 bushels.

A fair average price per bushel, $1.90, was obtained for the crop, which at this price would have returned to the producer $38,867.

The following table gives the area, yield and value of the 1893 crop of beans, together with those of sixteen years preceding:

YEAR.	Acreage.	Av. yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	1,545	13	19,955	$1 50	$29,916
1878	1,669	16	18,627	1 35	25,146
1879	2,674	14	36,217	1 50	53,225
1880	1,398	11	15,894	1 60	25,430
1881	1,012	3	3,267	3 30	10,681
1882	983	9	9,776	2 22	21,103
1883	1,091	14	15,738	2 00	31,374
1884	1,621	13	21,335	1 55	33,017
1885	2,660	17	44,457	1 45	64,908
1886	1,222	16	17,785	1 60	28,806
1887	1,923	12	23,151	2 15	49,983

1892	859	18	15,540	1 85	28,864
1893	1,708	12	20,621	1 90	38,867

CASTOR BEANS.

An encouraging increase in the area of castor beans is noted this year, when 10,014 acres were reported by assessors, the largest area since 1888.

The yield per acre of 9 bushels is also above the average, having been exceeded but twice in the past seventeen years. The total yield was 89,712 bushels.

The average price per bushel, $1.15, is less than usual, and the total value of the crop is $102,959.

In the following table is given the area, yield and value of the last seventeen crops of castor beans.

YEAR.	Acreage.	Av. yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	4,503	3¼	17,538	$1 10	$18,512
1878	371	7	2,526	1 25	3,157
1879	3,085	8 1-5	24,314	1 00	23,344
1880	500	6 4-5	3,480	1 05	3,654
1881	758	5¼	4,005	1 65	5,608
1882	2,088	2½	4,346	1 26	5,476
1883	433	8	3,464	1 35	4,688
1884	1,108	17	19,295	1 60	30,794
1885	3,825	12	46,283	1 65	76,997
1886	19,374	7	136,518	1 30	175,211
1887	14,978	7	95,721	1 00	95,596
1888	10,981	7	78,813	1 30	103,303
1889	9,631	8	78,283	1 80	141,180
1890	7,298	8	62,259	1 50	93,919
1891	5,761	6	37,151	1 50	55,398
1892	5,292	6	33,961	1 40	47,666
1893	10,014	9	89,712	1 15	102,959

TOBACCO.

This crop occupied four times as large an area in 1893 as in 1892, there being 3,329 acres planted. Although the yield per acre of 751 pounds was not quite up to the mark, the total yield of 2,499,225 pounds was the largest obtained for a number of years.

The price per pound, 7 cents, was a fair average, and the total value of the 1893 tobacco crop, $168,915, was larger than for six years past.

A table published elsewhere in this report gives the area, yield and value of tobacco in each county where it is raised.

The following table gives the area, yield and value of the crop in this State since 1876:

YEAR.	Acreage.	Av. yield per acre—pounds.	Pounds produced.	Price per pound.	Value of crop.
1877	12,320	640	7,885,586	$0 08	$638,848
1878	3,833	584	2,268,492	07	158,794
1879	3,079	890	2,741,329	09	246,719
1880	4,091	668	2,736,407	08	218,912
1881	3,854	453	1,749,474	08	139,798
1882	3,798	622	2,345,931	07	164,215
1883	3,092	710	2,195,426	06	140,920
1884	4,842	767	3,716,408	09	321,582
1885	7,028	802	5,634,066	05	310,922
1886	10,365	745	7,719,704	04	313,714
1887	2,705	544	1,471,528	05	76,538

1891	781	887	692,747	07	50,480
1892	849	942	799,543	08	64,003
1893	3,329	751	2,499,225	07	168,915

PASTURES.

A slight increase is noted in the area of pastures this season as compared with the last two years, there being 4,954,871 acres reported. Of this number 2,602,976 acres are in the northern division of the State, 1,772,794 in the central and 579,101 acres in the southern division.

The drought during the summer was exceedingly detrimental to pastures, and the value per acre of $3.40 is rather below the average.

The total value of pastures during the past season was $16,939,914.

A table published elsewhere in this report gives the area and value of pastures in each county in the State.

The following table gives the area and value of pastures for seventeen years past:

YEAR.	Acreage.	Value per acre.	Total value.
1877	4,367,603	$3 28	$14,764,112
1878	3,983,450	3 10	12,324,657
1879	4,193,884	2 95	12,319,620
1880	4,257,654	3 40	14,491,114
1881	2,206,621	3 40	14,397,176
1882	4,697,966	3 75	17,578,690
1883	4,752,828	3 60	17,073,741
1884	5,085,817	3 80	19,241,247
1885	5,417,147	3 25	17,729,714

1892	4,338,899	3 65	15,806,775
1893	4,954,871	3 40	16,939,914

VEGETABLES.

IRISH POTATOES.

Although not up to the standard prevailing a few years since, the area devoted to Irish potatoes this year, 99,784 acres, was 17,940 acres larger than in 1892, and as the average yield per acre, 63 bushels, was also larger than a year ago, the total crop, which amounted to 6,331,582 bushels, was over 2,000,000 bushels greater than in 1892.

The price per bushel, 69 cents, was a little above the average of the past ten years, and had the entire crop been sold at the December 1 price would have returned to the producer $4,373,738.

A table published elsewhere in this report gives by counties the area, yield and value of the Irish potato crop in this State this year.

The following table gives the area, yield and value of the Irish potato crops of the State since 1859:

YEAR.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	69,225	80	5,540,390	$0 31	$1,717,520	$24 80	$20 55	$1,423,190	$294,330

SWEET POTATOES

The area in sweet potatoes this year, 3,232 acres, is 329 acres greater than that of 1892, but the average yield per acre of 81 bushels is so much smaller than that of a year ago, that the total product, which is 262,111 bushels, is less than the 1892 crop.

A fair average price per bushel, 81 cents, was obtained, and the value of the crop amounts to $211,871.

A table published elsewhere in this report gives the area, yield and value of the crop in each county in the State.

The following table gives the area, yield and value of the sweet potato crop of the State for the past seventeen years:

YEAR.	Acreage.	Av. yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	2,355	63	148,270	$0 85	$126,029
1878	1,729	67	116,944	85	99,402
1879	1,423	88	126,169	90	112,552
1880	3,382	66	224,523	90	202,070
1881	1,815	63	114,486	1 08	123,645
1882	2,785	77	216,283	80	173,020
1883	2,696	83	228,605	75	171,847
1884	2,681	103	276,304	67	184,077
1885	2,825	92	261,590	59	153,716
1886	3,306	87	286,505	59	197,401
1887	2,881	68	196,594	95	186,084
1888	3,221	100	323,906	69	224,743
1889	4,126	90	370,616	58	215,646
1890	2,492	91	226,319	93	207,580
1891	3,828	104	397,159	62	247,205
1892	2,903	91	263,537	83	219,927
1893	3,232	81	262,111	81	211,871

TURNIPS AND OTHER ROOT CROPS.

Although a smaller area was devoted to turnips and other root crops this season than last, the increased valuation per acre, which was $94.10, makes the total value of these crops $336,385, a greater amount than has been realized from them for a number of years past.

The average yield per acre of turnips was but 61 bushels.

The following table gives the acreage and value of turnips and other root crops grown in the State during the past seventeen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877	7,056	$39 55	$279,136
1878	3,775	40 85	154,140
1879	3,139	230 15	722,444
1880	2,300	45 85	105,414
1881	3,046	147 20	448,369
1882	3,809	245 25	934,291
1883	4,361	205 75	897,304
1884	3,856	75 75	292,181
1885	3,002	83 50	257,387
1886	5,002	76 75	383,966
1887	2,592	81 20	210,432
1888	3,802	93 12	354,046
1889	4,509	118 42	533,950
1890	2,793	46 16	128,947
1891	5,208	39 40	207,780
1892	3,739	43 90	164,127
1893	3,575	94 10	336,385

OTHER CROPS NOT NAMED.

Under this caption are included the numerous small crops which are raised to a limited extent in the State, including vegetables raised for market and canning purposes, and these miscellaneous items are combined elsewhere in this report in a table with the above heading.

The value of these crops in 1893 was $138,701, of which $118,175 was raised in the northern division of the State, $5,556 in the central division and $14,970 in southern Illinois.

LIVE STOCK.

HOGS

The assessors' reports this year show nearly half a million more hogs in the State on May 1 than on the same date last year, there being 2,719,107 reported for 1893, but the number is not yet up to the average of past years.

At the equalized value of $1.69 per head, the value of this class of live stock was $4,595,291.

Eighty-three per cent. of the hogs reported to assessors were marketed, 2,256,851, which at an average weight of 227 pounds, amounts to 512,022,865 pounds.

It is eleven years since hogs have been so high as this season, when the average price of those marketed was $5.40 per cwt.

The total value of the hog product this season was $27,643,713.

The supply of hogs on hand December 1 is 81 per cent. of an average.

There has been some hog cholera, but it was not so prevalent or fatal as in some previous years. It is reported to some extent in the counties of Union, Wayne, White, Pope, Richland, Saline, Menard, Morgan, Sangamon, Scott, Woodford, Jersey, Macon, Marshall, McHenry, Ogle, Warren, Lake, LaSalle, Livingston, Clay, Edwards, Franklin, DeKalb, Calhoun, Cass, Vermilion, Alexander, Jefferson, Johnson and Champaign.

Kidney disease is reported among hogs in Kankakee county, and quinsy in Edwards.

The following table gives the number of hogs assessed and marketed in 1893, as well as their weight and value, for the last thirty-eight years:

YEAR.	Assessors' Returns.		Estimated per cent. marketed.	Number fat hogs marketed	Av. gross weight per head.	Total gross weight	Value per 100 lbs. gross.	Total value hog product.

CATTLE.

There is an increase of about 200,000 in the number of cattle reported this year as compared with last, the assessors' returns to this office amounting to 1,812,924. At the equalized value of $6.34 per head, they are worth $11,493,938.

A little less than one-fourth (23 per cent.) is marketed each year, the product for this year being 416,963 head. The average live weight of those marketed was 1,095 pounds, making a gross weight of 456,496,567 pounds.

A slightly better price, $3.40 per cwt., was obtained for beef cattle this year than last, and the total value of the cattle marketed since May 1, is $15,553,723.

There were 677,859 dairy cattle assessed at an average value of $30 per head, or a total of $20,184,394.

Very few reports of disease among cattle have been received, but the following items have been mentioned: A little lumpy-jaw in Whiteside county, black tongue in Macon and distemper in Tazewell and Jasper counties. Some abortion among cows is reported from Fayette county.

The following table gives the number, weight and value of the cattle marketed in the State since 1855:

YEAR.	Assessors' Returns.		Estimated per cent. marketed.	Number beef cattle marketed.	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Value beef cattle marketed.

SHEEP.

A larger number of sheep were reported by assessors last May than for a number of years past, there being 842,318 reported.

The equalized value of sheep this year is $1.04 per head, making the total value $876,011.

Twenty-two per cent. of the whole number, or 185,300, were marketed. Their average weight was 99 pounds, and the total gross weight 18,388,166 pounds.

The price per cwt., $3.15, was below the average price for the last few years. The total value of the sheep marketed was $577,069.

No disease among sheep was noted by our correspondents.

* ESTIMATED.

WOOL.

The amount of wool shorn has increased in proportion with the additional number of sheep, there having been 3,464,654 pounds reported, but the price per pound of 15 cents is the lowest reached since reports have been compiled by this Department, and the total value of the wool clip of 1893, $527,200, is the least return ever received for wool.

The following table gives the number of pounds shorn, the price per pound, and the total value of the wool clip for the last seventeen years:

YEAR.	Number lbs. shorn.	Price per pound.	Total value.
1877	3,291,677	$0 30	$987,503
1878	2,891,087	25	722,752
1879	3,944,558	35	1,380,595
1880	4,757,938	34	1,617,698
1881	4,636,711	29	1,344,646
1882	4,570,081	27	1,233,922
1883	4,447,808	26	1,099,822
1884	4,301,024	21	912,418

1891	2,782,684	23	631,790
1892	2,917,521	21	606,688
1893	3,464,654	15	527,200

HORSES.

There was an increase of 6,879 in the number of horses assessed this year, the assessors having reported 930,619 on May 1. At the equalized value of $19.41 per head, the value of the horses assessed is $18,063,315.

Stock of all kinds has been unusually free from disease during the past year, and the few cases reported among horses are as follows: Distemper in the counties of Wabash, Richland, Schuyler (where the colts were affected), McLean, Peoria, Kankakee, Knox and Livingston; in Rock Island county several horses died of lung fever, and in Schuyler county horses suffered from influenza.

The number of colts foaled in 1892 is given at 118,440.

The following table gives the number of horses assessed in the State since 1855, and their equalized valuation, as well as the number of colts foaled each year:

YEAR.	Assessors' Returns.		Number colts foaled.
	Number.	Value.	
1856	407,736	$23,118,584	
1857	467,531	25,434,171

DAIRY PRODUCTS.

MILK.

In the northern division of the State there was an increase of 15 per cent. over 1892 in the amount of milk sold this season, and although in central and southern Illinois a slight decrease was noted, the total amount sold was much greater than last year. The milk sold in Illinois in 1893 amounted to 116,552,480 gallons, the largest amount ever sold in this State. A fair average price of 12 cents per gallon was received, making the total value of milk sold during the year $14,505,347.

YEAR.	Gallons sold.	Price per gallon.	Total value.
1877	17,124,506	$0 11 1-6	$1,912,236
1878	30,567,415	10½	3,209,579
1879	96,659,845	08	7,732,788
1880	38,986,851	09 1-6	3,573,796
1881	40,153,488	09½	3,814,581
1882	41,433,620	20	8,286,724
1883	43,006,273	14	5,923,207
1884	50,056,318	13	6,703,071

1892	100,891,071	12	13,925,325
1893	116,552,486	12	14,505,347

CREAM.

The amount and value of the cream sold in Illinois in 1893 is the largest ever known, there having been 3,895,823 gallons sold, at an average of 67 cents per gallon, and a total value of $2,603,233.

The quantity and value of the cream sold in the State since 1876 is given in the following table:

YEAR.	Gallons sold.	Price per gallon.	Total value.
1877	2,744,259	$0 55	$1,509,342
1878	62,707	52	32,608
1879	230,947	49	112,943
1880	601,314	50	300,657
1881	1,380,936	51	704,279
1882	2,188,396	62	1,356,805
1883	2,324,579	57	1,329,826
1884	1,479,183	40	600,219
1885	2,553,415	46	1,184,986
1886	3,468,498	50	1,728,293
1887	2,435,439	52	1,271,451
1888	3,418,261	49	1,663,023
1889	2,778,952	49	1,352,587
1890	2,072,695	50	1,039,452
1891	2,683,844	59	1,587,500
1892	1,453,945	62	909,236
1893	3,895,823	67	2,603,233

BUTTER.

There was 16,465,134 pounds of butter sold in this State this year, which was valued at $3,817,859.

The average price per pound, 23 cents, is less than has been obtained for this product for two years past.

In the following table will be found the quantity and value of the butter sold in Illinois during the past seventeen years:

YEAR.	Pounds sold.	Price per pound.	Total value.
1877	18,970,227	$0 20	$3,794,045
1878	17,997,652	15	2,699,648
1879	25,028,225	19	4,755,363
1880	24,553,449	20	4,910,690
1881	21,578,414	26	5,610,647
1882	21,658,054	25	5,414,763
1883	22,198,370	25	5,606,737
1884	22,696,333	21	4,749,507
1885	20,166,720	19	3,812,664
1886	19,779,293	19	3,726,323
1887	19,121,237	21	3,970,919
1888	21,568,159	23	5,009,069
1889	22,840,998	18	4,175,224

1893	16,465,134	23	3,817 859

CHEESE.

The following table shows the quantity and value of the cheese sold in the State since 1876:

YEAR.	Pounds sold.	Price per pound.	Total value.
1877	4,502,671	$0 12	$540,320
1878	5,139,914	10	513,691
1879	6,618,212	13	860,367
1880	6,187,680	13	803,398
1881	5,837,974	15	875,696
1882	5,252,036	14	734,285
1883	4,931,826	14	672,474
1884	4,795,677	10	488,622
1885	2,312,265	10	230,795
1886	2,557,865	10	267,503
1887	3,484,933	12	422,018
1888	2,064,134	12	253,618
1889	1,600,592	12	185,778
1890	1,704,536	12	205,669
1891	1,186,133	12	148,488
1892	607,115	13	77,388
1893	1,513,690	11	174,044

Tables published elsewhere in this report give, by counties, the quantity and value of the dairy products of the State for 1893.

An examination of these tables discloses the fact, perhaps not generally known, that the dairy interest is very slightly developed in the central and southern divisions of the State—fully nine-tenths of the amount received from this industry being in the northern division.

FRUITS.

APPLES.

For the fourth year in succession the apple crop of the State was practically a failure, and orchardists feel much discouraged.

The quality of the fruit was very inferior and it was found difficult to obtain a sufficient quantity of representative specimens of each variety to make a fair showing at the World's Fair of Illinois productions in this line.

According to the well known law of supply and demand, the price of the fruit was in inverse proportion to the quantity and the ruling price December 1 of $1.30 per bushel is the highest obtained in the State since 1876, exceeding the 1892 price by 20 cents. But 804,075 bushels were raised, which were valued at $1,034,735.

The following table gives the number of bushels of apples and the value of the crops since 1876:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877	5,395,351	$0 80	$4,316,281
1878	4,940,811	65	3,211,527
1879	5,858,690	75	4,469,017
1880	10,342,186	56	5,791,624
1881	2,659,529	1 22	3,244,625
1882	6,557,128	80	5,245,702
1883	6,818,520	75	5,134,042
1884	4,152,925	65	2,987,850
1885	3,778,644	61	2,292,731
1886	4,037,765	52	2,118,640
1887	1,958,338	85	1,664,695

OTHER FRUITS AND BERRIES.

The following table gives the acreage and value of other fruits and berries not named above for the past seventeen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877	4,523	$35 53	$178,800
1878	2,569	55 51	197,581
1879	3,111	59 62	185,488
1880	7,803	29 65	231,417
1881	7,670	26 34	298,086
1882	5,881	47 50	279,360
1883	4,583	58 33	267,313
1884	10,181	24 63	250,747
1885	6,401	32 46	305,123
1886	7,884	29 82	235,140
1887	7,528	27 25	205,140
1888	5,908	25 10	148,340
1889	5,626	22 50	126,685
1890	5,213	18 42	96,049
1891	4,897	23 76	116,340
1892	3,605	39 79	143,456
1893	2,388	47 12	112,523

STRAWBERRIES.

An unusually small strawberry crop was raised in Illinois this year, its value being but $47,202. Of this amount $16,460 was produced in the northern grand division, $7,204 in the central and $23,538 in southern Illinois.

A table published elsewhere in this report gives the value of the crop in each county in the State.

WATERMELONS.

Only $30,165 was returned to the watermelon raisers of the State this year.

In a table published elsewhere in this report the value of watermelons raised in each county in the State is given.

BEES AND HONEY.

There was 571,836 pounds of honey produced in Illinois in 1893, which was 23 per cent. less than the 1892 product.

At the average price of 14 cents per pound, it was worth to the producer $83,131.

There were 57,710 hives of bees reported in the State in 1893.

POULTRY AND EGGS.

The value of the poulty sold in the State this year, $1,279,541, was 1 per cent. less than that sold last year.

The value of eggs sold during the year, $1,047,881. was just about the same as last year.

The value of these two side issues, so to speak, amounts to $2,327,422, a by no means insignificant amount.

INSECT INJURY TO CROPS.

The depredations of insects, while pretty evenly distributed over the State, have not been nearly so severe as in some seasons.

The following are the principal cases noted: Hessian fly is reported as working in the wheat in Christian, Clinton, Edwards, Johnson, Madison, Richland, Schuyler, Wabash, Wayne and White counties.

In Jasper county the wheat is injured by a worm at the root, which cuts off the outside blade below the surface, and causes the plant to turn red.

Chinch bugs injured corn to a greater or less extent in the counties of Bond, Calhoun, Christian, Clinton, Edwards, Fayette, Jo Daviess, Jefferson, Knox, La Salle, Livingston, Macoupin, Marion, Mercer, Perry, Scott, Shelby, Tazewell, Washington and Winnebago.

Chinch bugs also did some damage to oats in Carroll and Livingston counties.

In Champaign county the corn louse was very injurious to corn, and it also did some damage in Warren county; a brown worm an inch long worked on the ears of corn in Adams county; in Kendall county cut-worms and gopher injured this crop, and in Knox and Shelby counties grub-worms did some damage.

In Pope county a new insect is reported in the corn. It is a black worm one-eighth of an inch long which gets under the slips of the stalk and sucks it to death.

Corn in Massac county was injured by worms eating the grains.

Grasshoppers did considerable damage to crops in the counties of St. Clair, Will, Winnebago, Lake, LaSalle, Coles, Douglas, Bond, Vermilion, Mercer, Putnam, Clinton, Fayette, JoDaviess and Pike.

In Cook and DeKalb counties the army worm injured oats and millet, and in Coles and Tazewell potato bugs were very bad. In the latter county they nearly destroyed the crop.

SUMMARY.

The following table gives in small space the value of the principal farm products and live stock of Illinois for the year 1893.

Corn	$51,099,698
Winter wheat	8,881,338
Spring wheat	276,370
Oats	22,985,087
Rye	734,594
Barley	135,422
Buckwheat	29,344
Hay	26,079,671
Timothy seed	211,390
Clover seed	572,608
Hungarian and millet seed	16,053
Flax seed	19,297
Irish potatoes	4,373,738
Sweet potatoes	211,871
Turnips and other root crops	336,385
Broom corn	501,678
Sorghum	283,519
Beans	38,867
Castor beans	102,959
Tobacco	168,915
Other crops not named	138,701
Apples	1,034,735
Peaches	116,704
Pears	9,331
Grapes	48,972
Strawberries	47,202
Watermelons	30,165
Other fruits and berries	112,523
Wine	88,238
Honey	83,131
Horses (equalized value)	18,063,315
Beef cattle (equalized value)	11,493,938
Dairy cows	20,184,394
Hogs (equalized value)	4,595,291
Sheep (equalized value)	876,011
Wool	527,200
Milk sold	14,505,347
Cream sold	2,603,233
Butter sold	3,817,859
Cheese sold	174,044
Poultry sold	1,279,541
Eggs sold	1,047,881
Total	$197,936,560

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

Illinois Crop Report,

—FOR—

MAY 1, 1894.

Synopsis of the Reports of Correspondents Upon the Acreage and Condition of the Growing Crops, Etc.

Illinois State Board of Agriculture,
Springfield, May 1, 1894.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of May.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large portion of the correspondents have been reporting to this Department for the past eighteen years, and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State so as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER WHEAT.

The first official reports received at the office of the Department of Agriculture since the severe freeze of March 25, show that the damage done to the wheat at that time was greatly overestimated. On the low lands, where the stalk had jointed, considerable damage was done, but as only a very small proportion of the area had reached that stage, the real injury was slight. In some counties in the southern division of the State, correspondents report that the cold was beneficial to wheat instead of detrimental, as the warm weather had caused it to start too rank, while the cold checked the rapid growth and caused it to spread. The entire amount winter-killed during the past season, 93,429

acres, was but a fraction over 5 per cent. of the area seeded, 1,821,427 acres. The are afor harvest in northern Illinois is 56,344 acres; in central Illinois 743,990 acres, and in the southern division 927,664 acres, making a total of 1,727,998 acres.

In but four counties has any damage to wheat by insects been reported. In Alexander and Clark counties fly has been noticed, and in Macoupin and Washington chinch bugs are reported, but it is not thought they will do very much harm.

The May 1 condition of winter wheat is exceptionally good, being 93 per cent. of an average in the northern division, 95 in the central and 96 in the southern division, while at the same date in 1893 the condition was 72, 61 and 83 per cent. in the divisions in the order named.

SPRING WHEAT.

The area devoted to Spring wheat in northern Illinois this year is 87 per cent. as compared with 1893, when 34,138 acres were reported to the assessors. In the central division of the State Piatt is the only county reporting this crop. Both area and condition are reported as 100. In the northern division the May 1 condition is within 6 points of a seasonable average, and is slightly better than for two years past.

OLD WHEAT.

A much smaller amount of old wheat is now in producers' hands than is usual at this date. In the entire State there is now but 2,657,854 bushels in first hands, while a year ago there was nearly that amount in the Southern Division.

This is partly owing to the poor crop of 1893, when but 18,916,314 bushels of wheat were raised in Illinois, and partly to the low prices for the last year. Many farmers have despaired of getting a better price for their grain by holding, so have sold a large proportion of it, while some have tried the experiment of feeding it to stock, regarding it as a cheaper food than corn at ruling prices, and have reduced their surplus in that way,

The following table gives the amount of "old wheat" in first hands the first of May, since and including 1880:

YEAR PRODUCED.	Crop in bushels.	Per cent. crop on hand following May 1.	Amount crop in producers' hands following May 1.	Surplus whe't above seed and consumption at harvest.	Deficit at harvest.
1880	56,508,309	*15	8,476,246	39,851,883	
1881	22,374,163	13	2,924,039	5,765,414	
1882	52,323,261	15	8,174,634	36,214,133	
1883	20,374,572	15	3,208,358	4,575,152	
1884	34,367,493	18	6,350,202	17,367,794	
1885	5,299,243	14	1,201,904		5,439,786
1886	28,284,086	15	4,000,931	12,082,999	
1887	38,076,486	13	5,034,875	21,942,119	
1888	33,916,920	12	4,022,569	17,334,947	
1889	37,201,916	15	5,722,594	20,919,433	
1890	13,608,504	12	1,580,903		2,002,400
1891	34,620,828	17	5,563,995	16,853,536	
1892	30,578,543	18	5,428,060	13,086,069	
1893	18,916,314	14	2,657,854	891,488	
Average	30,460,760	15	4,596,226	17,240,414	3,721,093

* Estimated.

The amount of surplus wheat above seed and consumption given in the above table is determined by deducting at time of harvest from the entire corp of the season, the quantity required to seed an area equal in extent to that harvested, at the rate of 1⅓ bushels per acre, and provide 4 bushels per capita for consumption during the ensuing twelve months.

RYE.

Only a fraction over 2 per cent. of the area seeded to rye last fall was winter-killed, leaving 106,759 acres for harvest. The southern division suffered most, 4 per cent. of the area being injured.

The May 1 condition of the crop is 96 per cent. of an average in the northern division, and 97 per cent. in the central and southern divisions of the State. This is a much better condition than has been reported at this date for two years past.

OATS.

The warm weather early in March caused farmers to put in their oats rather earlier than usual, and an exceptionally large area was sown, owing to the fact that wheat is so low as to offer little inducement to farmers to increase the acreage of that cereal.

The weather was favorable for the germination of the seed, and oats were "booming" when the cold snap of March 25 cut them down, so that a considerable proportion of the area in the southern division had to be plowed up. While a good deal of oats was sown the second time, a portion of the original seeding was left for corn, so that the area of oats in the southern division is 5 per cent. less than last year. In northern Illinois the area is about the same as in 1893, and in the central division of the State it is 1 per cent larger. The total oats area for 1894, as compared with 1893, is 99 per cent., or 3,318,851 acres.

The May 1 condition of oats is encouraging for 96 per cent. of an average yield per acre in the northern division of the State and 89 per cent. in the central division, while in southern Illinois only 74 per cent. of an average yield per acre is anticipated.

BARLEY.

Of the seventeen counties reporting on this crop, one is in the central and one in the southern division, and the area and condition are given as 100 per cent. in both instances. The area of the fifteen counties in northern Illinois is 92 per cent. as compared with last year, and the May 1 condition is within 2 points of a seasonable average.

OLD CORN,

In the northern division there remains in the hands of the producers 28 per cent. of the old corn crop, or 21,274,869 bushels, or 3,691,534 bushels less than on May 1 last year; in the central division there is about 22 per cent. or 16,177,400 bushels of the old crop on hand, about 1,751,158 more than at same date last year; in the southern division 18 per cent., or 3,612,113 bushels, which is nearly 594,427 less than was reported in 1892.

Taking the State as whole there is remaining in the hands of the farmer 24 per cent., 41,064,384 bushels, the 1893 crop having been 167,607,971 bushels.

The report of this year's planting will be given in the June 20 report, but sufficient information has been received to warrant the statement that there will be an unusually large area in corn in Illinois this year, and the season has been so favorable that in

southern and central Illinois nearly the whole corn crop is now in, and in the central division a great deal of it is up.

The following table gives the amount of "old corn" in the producers' hands May 1, the past fifteen years, as well as the extent of the crop produced each succeeding year:

Year Produced.	Crop in bushels.	Per ct. corn on hand following May.	Bushels corn in producers' hands following May.
1879	305,913,277	32+	99,229,889
1880	250,697,036	28+	71,929,343
1881	174,491,706	21+	37,445,964
1882	179,471,729	24+	43,450,857
1883	186,583,558	21+	39,478,621
1884	207,556,662	24+	50,102,264
1885	230,922,298	24+	57,047,027
1886	182,755,053	24+	43,346,028
1887	129,537,603	18+	23,573,279
1888	277,726,451	33+	92,584,238
1889	247,980,589	36	90,503,175
1890	164,512,020	20	32,653,868
1891	217,982,050	35	75,969,599
1892	137,540,285	32	45,599,187
1893	167,687,971	24	41,064,384
Average	204,090,559	27	56,265,181

MEADOWS.

The area in meadows this year is 5 per cent. less than in 1893 when 2,788,903 acres were in mowing land. In the northern division of the State the area as compared with last year is 95 per cent.; in the southern division it is 98 per cent., while in central Illinois there is a deficiency of 9 per cent.

Although there is a slight increase in the area of meadows in some localities, as a rule the tendency is the other way. Many farmers are plowing up part of their meadows for corn and oats.

The May 1 condition of meadows is 92 per cent. of an average. The March freeze did considerable damage to meadows, but the late rains have benefited them greatly. In Ford county clover was badly frozen out last winter. The condition of meadows in northern Illinois is 95 per cent. of an average; in central Illinois 88 per cent. and in southern Illinois 94 per cent. There is some complaint of worms in meadows in Morgan county.

PASTURES.

Both the area and condition of pastures are slightly better at this date than those of meadows, the State average for both area and condition being 97 per cent. In the northern division the area and condition are both 97 per cent.; central Illinois, area 94, condition 88; southern Illinois, area 99, condition 95. The same general causes have produced the same results in pastures as in meadows.

LIVE STOCK—HORSES.

The estimated number of horses in the State May 1, is 1 per cent. less than a year ago, when 930,619 were reported to the assessors. The number in northern Illinois is 97 per cent. as compared with 1893; in central Illinois 99 per cent., and in southern Illinois 102

per cent. Although distemper among horses has been reported from the counties of Morgan, Piatt, Madison, DeKalb, Stark, Peoria, Grundy, Kane and Knox, and kidney trouble in Hancock county, the condition of horses is nearly a fair average for this season—97 per cent. In LaSalle county there has been trouble with colts, many of them dying when a day or two old, and many of the others being weak.

MULES.

The number of mules this year is 3 per cent. less than last year, and their condition is within 2 per cent. of a seasonable average.

CATTLE.

Fewer cattle are reported this year than last by 8 per cent. In the northern and southern divisions of the States, the proportion is 93 per cent., and in central Illinois 89 per cent. No reports of disease among cattle have been received and the May 1 condition is 97 per cent. of an average.

DAIRY COWS.

While some counties report an increase in the number of dairy cattle this season, there is a deficiency in others, so that the total number in the State is 4 per cent. less than last year. The number in northern Illinois is 2 per cent. less than in 1893; in central Illinois 7 per cent. less, and in the southern division 4 per cent. less.

In Knox county a few cows have died of milk fever, but otherwise their health is good and within two points of a seasonable condition.

HOGS.

The number of hogs on hand May 1, 1894, is 9 per cent. less than in 1893, when 2,719,107 hogs were reported. In the northern division of the State the proportion is 94 per cent.; in the central division 91 per cent., and in the southern division 88 per cent.

Hog cholera is reported from the counties of Morgan, Crawford, Hamilton, Pulaski, Douglas and Greene, and distemper from Union county. In Stephenson county there has been some difficulty with hogs farrowing, and in Henderson a good many pigs come dead or die very soon. Some farmers think that not over 50 per cent. will be saved. In Ogle county there is a good deal of complaint of sows eating their pigs, and some hogs have been lost by turning on to pasture too suddenly. The May 1 condition of hogs in the northern, central and southern divisions is 98, 99 and 96 per cent., respectively.

SHEEP.

The number of sheep as compaped with last year, and their May 1 condition, are both given as 97 per cent., and no disease of any kind is reported among them.

BEES.

Bees as a rule did not do well last winter, principally on account of not being able to lay in a sufficient supply of food last fall, and many stands were also winter-killed.

SPRING WORK.

Taking the State as a whole, spring work is more advanced than at this date last year by 6 per cent. In northern Illinois the gain is 8 per cent., and in central Illinois 15 per cent., but in the southern division there is a deficiency of 7 per cent.

The ground was in fine condition for work this spring, and farmers generally took advantage of that fact and did their plowing and planting early. In southern Illinois, however, where vegetation was more advanced, the March breeze caught the oats and consequently a large portion of the work there had to be done the second time, which probably accounts for their being so behind hand now.

FRUIT.

The prospect for fruit in Illinois this year has not been more discouraging for a long time. The exceedingly cold weather of March 25, followed upon a period of unusually high temperature for the season, which had caused all kinds of vegetation to come forward very rapidly, and in its exceedingly tender condition it was easily affected by a fall of temperature.

It was thought at first that all the fruit was killed, but later indications are that a few of the later blooming varieties of apples will produce small quantities, and there may be a few plums and cherries. Peaches will be a failure, but there will be some strawberries and other small fruits, though it is too early to make any definite forecasts.

Douglas county reports that apples promise much better now than they did a few weeks ago. New blossoms formed after the freeze, especially on the Minklers. The Ben Davis seems to have suffered more severely than other varieties.

WAGES PAID FARM HANDS.

Owing to the closing of factories and reduction of force in industries of all kinds, there is an unusually large number of idle men this spring, so that farmers have no difficulty in obtaining all the help they need, but the trouble is to find capable, willing hands. Many of those out of employment do not want work, and are glad of an excuse to remain idle. Farming, as well as every other business interest, feels the effect of the hard times, and many farmers are hiring just as little help as possible this spring.

The excess of farm hands is 7 per cent., and is very equally distributed throughout the State.

Wages paid to farm hands this season are a very little less than for a few years past. More difference is noticed in southern Illinois than in the other divisions of the State.

The average wages paid farm hands during the past fifteen years in the three grand divisions of the State, are given in the following table:

DIVISION.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board.	Without board.
Northern	$1 00	$1 30	$19 75	$27 65
Central	85	1 10	17 95	24 75
Southern	65	90	14 60	20 70
Average	$0 85	$1 10	$17 45	$24 35

The wages paid farm help in the three divisions of the State, during the past fifteen years, is given in the following tables:

NORTHERN DIVISION.

YEAR.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board	Without board.
1880	$0 95	$1 15	$17 55	$25 25
1881	95	1 25	19 55	27 25
1882	1 05	1 40	21 40	29 75
1883	1 05	1 35	21 15	29 75
1884	1 00	1 25	20 50	29 00
1885	1 00	1 25	19 50	27 75
1886	1 00	1 30	19 20	27 80

1894	60	85	14 35	20 20
Average	$0 65	$0 90	$14 60	$20 70

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

ILLINOIS CROP REPORT,

—FOR—

JUNE 20, 1894.

Synopsis of the Reports of Correspondents Upon the Acreage and Condition of the Growing Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, June 20, 1894.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the twentieth of June.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large portion of the correspondents have been reporting to this Department for the past eighteen years, and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State so as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

CORN.

Rarely has the June 20 condition of corn been so favorable as this season, when it is but 5 points less than a full average. The quality of the seed corn was nearly 3 per cent. better than usual, which accounts to a great degree for the excellent stand. The season was exceptionally favorable for the planting and cultivation of the crop, and fields are generally clean and free from weeds. Up to this date no real injury has resulted from drought, but unless soaking rains come soon, it is feared they will be too late to benefit corn much. Already in some of the central and southern counties the leaves roll during the day, but the night dews revive them.

Although cut worms have done some damage to corn in Henderson county, wire worms in Kane and Saline counties, moles in Hardin and Massac, and chinch bugs are reported in corn in Bond and Clinton counties, the damage done so far is very small, but there is danger of chinch bugs invading corn fields from adjoining wheat fields when that crop is harvested. In Kane county crows and gophers pulled up considerable corn before it was large enough to cultivate.

The area devoted to corn this year is nearly 3 per cent. larger than in 1893, when 6,416,488 acres were reported by the assessors.

NORTHERN DIVISION.

In the northern portion of the State the area is 1 per cent. greater than last year, when 2,842,838 acres of corn were planted, giving 2,871,266 as the probable area this year.

The June 20 condition of the crop, 96 per cent., is 1 per cent. poorer than last year and 10 per cent. better than the average of the three preceding years at this date.

The quality of the seed corn was 4 per cent. better than an average.

The first appearance of corn in northern Illinois was on April 15, in Knox countp.

CENTRAL DIVISION.

In central Illinois the most favorable condition of corn occurs, being but 1 point short of a full average, 99 per cent. The least encouraging report from this division is from Shelby county, where the June 20 condition is given as but 77 per cent. of a seasonable average. The area is reported as 5 per cent. greater than last year, making 2,755,637 acres as the area of the 1894 corn crop in central Illinois.

Seed corn was 4 per cent. better than usual in this division of the State.

Corn was reported above ground on April 1 in Scott county, but the greater part of it was not visible until April 15 to May 1.

SOUTHERN DIVISION.

The least encouraging reports on corn come from southern Illinois, where the June 20 condition is but 89 per cent. of a seasonabie average. While this is 5 points below the 1893 condition, it is 7 points higher than the average for the last three years. In but two counties in this division, Alexander and Clay, is the June 20 condition reported as high as 100 per cent.

The area devoted to corn in this section is 2 per cent. higher than in 1893, or 968,219 acres.

The seed used this season is a full average as to quality.

In Johnson, Lawrence and White counties corn was visible above ground April 1.

BROOM CORN.

There is a smaller area devoted to broom corn this season than last by 5 per cent., so that the area will be a little short of 26,000 acres. In Adams county there is an increase of 10 per cent. in the area, and in Cumberland and Piatt counties one of 5 per cent each; but in the three broom corn counties of Coles, Douglas and Edgar there is a decrease of 8, 1 and 5 per cent. respectively.

The June 20 condition for the whole State is 92 per cent., but in the central division, where most of the broom corn is grown, it lacks but 2 points of being a full seasonable average.

SORGHUM.

This crop will be planted to a smaller area this year than last by 8 per cent. Only six counties in the State, Will, Coles, Douglas, Pulaski, Randolph and Saline, report a larger area than last year.

The June 20 condition of sorghum is 91 per cent. of an average.

WINTER WHEAT.

The June 20 reports indicate that the winter wheat crop of the State will be excellent, both as to yield per acre and quality.

In northern Illinois the June 20 condition is about the same as on May 1, 93 per cent. of a seasonable average; in central Illinois there has been an improvement of 2 points during the last six weeks, the June 20 condition being 97 per cent., while in the southern division of the State there has been a deterioration of 4 points during the same time, the June 20 condition being 92 per cent. of a seasonable average.

Taking the condition of the crop throughout the State into consideration, the 1894 condition is 94 per cent. of an average, which is 22 points better than on the same date last year.

Chinch bugs are reported in wheat in the counties of Winnebago, Christian, Clark, Douglas, Hancock, Mason, Menard, Bond, Edwards, Effingham, Marion and Perry, and Hessian fly in Clark, Tazewell, Edwards and Effingham counties. In Edwards county there is considerable smut in wheat, and rust in Clark county. In the latter county also, the head is infested by a small louse that sucks the sap from the grain.

In the northern division of the State harvest has not yet commenced, nor in many of the central counties, but in southern Illinois it is well under way. The earliest date on which harvest commenced was June 1, in Effingham and Richland counties. In central Illinois harvest began on June 12, in Jersey county.

Threshing has not yet commenced, so it is impossible to form any accurate estimate of the yield per acre.

SPRING WHEAT.

The June 20 condition of spring wheat in northern Illinois is 4 points below that of May 1 and 10 points below a seasonable average.

In the one county in central Illinois reporting on this crop, Piatt, the condition is a good average.

Chinch bugs have done some damage to spring wheat in Livingston county.

OATS.

While the area devoted to oats is nearly as large as in 1893, the June 20 condition of the crop is encouraging for but 83 per cent. of an average yield per acre.

The March freeze caught oats badly, and they have never entirely recovered from the effects of it. They have also suffered to some extent from the drought, and the straw as a rule will be very short.

The June 20 condition of the crop in northern Illinois is 89 per cent. of a seasonable average, but six counties in this division reporting the condition as better than usual.

Only two counties in central Illinois, Clark and Cumberland, report the June 20 condition above an average, and the condition of the entire division is but 84 per cent.

In southern Illinois even more unfavorable conditions prevail, the June 20 condition being but 77 per cent. of an average, and in Hardin county alone may a full average yield per acre be expected.

Chinch bugs have invaded the oat fields in Macon and Fayette counties.

RYE.

The June 20 condition of rye is not quite so good as that of May 1, being 93 per cent. of an average in northern Illinois, 94 per cent. in central and 97 per cent. in southern Illinois.

BARLEY.

The area devoted to barley this year in northern Illinois is 8 per cent. less than last year, when 18,916 acres were sowed. Very little barley is raised in the other divisions of the State, and the area is about as usual.

The June 20 condition in northern Illinois is 94 per cent. of a seasonable average, 60 per cent. in the central and 100 per cent. in the southern division.

MEADOWS.

Meadows have not increased in area since last year; on the contrary they are 5 per cent. smaller than in 1893. In northern Illinois the area is 5 per cent. less than last year, in central Illinois 9 per cent. less, and in the southern division of the State 2 per cent. less. Two counties in the northern division, one in the central and eight in the southern report an increased area over last year.

The June 20 condition of the crop is favorable for less than three-fourths of an average yield per acre—70 per cent. In the northern and central divisions but 68 per cent. of an average yield per acre may be expected, and but 73 per cent. in southern Illinois. In Union county alone is there a prospect of a full average yield per acre.

There has been a great deterioration in meadows since May 1, when their condition was 95, 88 and 94 per cent. in the northern, central and southern divisions respectively.

The continued dry weather is largely responsible for the poor condition of meadows, though the March freeze weakened them greatly, and it is probable that they never entirely recovered from the set back they then received.

CLOVER.

Clover meadows have shrunk in area even more than other varieties in the last twelve months, and the 1894 area is estimated as 15 per cent. smaller than that of 1893.

The area in clover in northern Illinois is 85 per cent. as compared with last year; 80 per cent. in the central division, and 90 per cent. in the southern

Clover has suffered a great deal from the March freeze and later drought, and the June 20 condition is encouraging for but 80 per cent. of an average yield per acre. The poorest condition is reported from the northern portion of the State, where but little more than three-fourths—77 per cent.—of an average yield per acre is anticipated. In central Illinois the June 20 condition is 80 and in southern Illinois 84 per cent. of a seasonable average.

HUNGARIAN AND MILLET.

The area in these crops this year is 92 per cent. as compared with last year.

In northern Illinois the 1894 area is 91 per cent., in central Illinois 89 per cent. and in the southern division 96 per cent.

PASTURES.

Pastures, in common with all other grass lands, have suffered severely during the last few months, and their condition is scarcely more than three-fourths of a seasonable average. In northern and southern Illinois the June 20 condition is 79 per cent. of an average, and in the central division 74 per cent. Pastures are badly burned by the drought and furnish very little food for stock.

The area in pastures this year is 97 per cent. in the northern division of the State, 94 per cent. in the central division and 99 per cent. in the southern portion of the State.

IRISH POTATOES.

There has been a very general inclination to increase the area of Irish potatoes this season, and in both the northern and central divisions the increase is given as 4 per cent. as compared with last year, while in southern Illinois an increase of 5 per cent. in the area is reported.

The June 20 condition of the crop is not so encouraging, being but 89 per cent. of a seasonable average in northern Illinois, 88 per cent in central and 91 per cent. in the southern division of the State.

SWEET POTATOES.

The area devoted to sweet potatoes this year is 7 per cent. less than that of 1893 in northern Illinois, 6 per cent. less in the central and 8 per cent. less in the southern division.

The June 20 condition of the crop is 86 per cent. of a seasonable average in the northern division, 83 per cent. in the central and 74 per cent. in the southern division.

FLAX.

Less and less flax is raised each year in Illinois, what there is being almost exclusively confined to the northern division of the State.

In this section the area is reported as 95 per cent. compared with that of 1893, and the June 20 condition as 97 per cent. of a seasonable average.

In Fayette county, the only one making a report on this crop outside of the northern division, both area and condition are given as 100 per cent.

TOBACCO.

Five counties in northern Illinois report on this crop, and the area is 94 per cent. as compared with last year, and the June 20 condition 87 per cent. of a seasonable average.

In central Illinois three counties give the area as 95 per cent. and the condition 90 per cent.

Nearly the whole tobacco crop of the State comes from southern Illinois, and in that section the area is but 1 per cent. less than last year, but the June 20 condition is but 84 per cent. of a seasonable average.

FIELD BEANS.

In the northern division of the State the area in field beans is 97 per cent. as compared with last year, and their June 20 condition is 92 per cent. of a seasonable average.

In central Illinois the decrease in area compared with 1893 is 4 per cent., and the June 20 condition is 86 per cent. of a seasonable average.

An increase of 1 per cent. in area is noted in southern Illinois, but the June 20 condition is only 84 per cent. of a seasonable average.

FIELD PEAS.

Very little attention is paid to field peas in this State, but the area is about the same as last year.

In the northern division of the State it is 4 per cent. less than in 1893, but there is a corresponding increase in southern Illinois.

No county in the central division reports on this crop.

FRUIT.

Little, if any, more fruit will be produced in Illinois this year than last. The outlook for fruit growers is very discouraging, but the tide will have to turn some time, and then those who have turned their attention in this direction will reap their reward.

Curculio has done some damage to fruit in Lee county, and in Piatt locusts have injured orchards somewhat.

CHERRIES.

The cherry crop of the State this year was very light, being but 46 per cent. of an average.

In the northern division but 87 per cent. of a crop was obtained, and 42 per cent. in the central division, while in southern Illinois only 10 per cent. of an average yield was obtained. The best yields in this division were in Clay, Hamilton and Pope counties where the yield was 50, 62 and 50 per cent. of an average respectively. In no other counties was one-fourth of an average crop obtained, and in fourteen counties an absolute failure of the cherry crop was reported.

STRAWBERRIES.

Rather more strawberries were obtained this year than cherries, but the crop was barely more than half as large as usual—51 per cent.

In northern Illinois the yield was 58 per cent. of an average, 40 per cent. in central Illinois and 56 per cent. in the southern division of the State.

RASPBERRIES.

A little over two-thirds (68 per cent.) of a crop of raspberries was obtained in this State this year. While eight counties report as large a yield as usual, none report a larger one, and in the great majority of the counties in the State the yield was very light. In the northern division of the State 81 per cent. of an average yield was obtained, 64 per cent. in the central division and 60 per cent. in the southern.

GOOSEBERRIES.

In northern Illinois the yield of gooseberries was 84 per cent. of an average; in central Illinois 59 per cent.; and in southern Illinois 56 per cent. The total yield was but 66 per cent. of an average.

CURRANTS.

A small crop of currants was obtained this year, but 61 per cent. of an average. This was divided as follows: 81 per cent. in northern Illinois, 53 per cent. in central and 49 per cent. in the southern division of the State.

VINEYARDS.

The area in vineyards does not show any increase this year, being 4 per cent. less than in 1893.

While the prospect for a good grape crop is not very encouraging at this date, nevertheless a better yield of this fruit is expected than of almost any other kind, the June 20 condition being 84 per cent. of a seasonable average.

In the northern division of the State, the June 20 condition is 82 per cent. of an average, 75 per cent. in the central division and 93 per cent. in the southern division.

YOUNG LIVE STOCK.

PIGS

The number of young pigs this season is 8 per cent. less than last year. More pigs than there were last year were reported from the counties of Cook, DeKalb, DuPage, Grundy, Henry, Putnam, Woodford, Brown, Christian, Cumberland, Hancock, Macoupin, Mason, Menard, Montgomery, Pike, Lawrence, Massac, Pulaski, St. Clair and White.

The June 20 condition of pigs is 96 per cent. of an average, and varies but little in the three grand divisions of the State.

LAMBS.

There are fewer lambs this year than last by 11 per cent. In northern Illinois the number is 91 per cent. as compared with last year, 87 per cent. in central and 88 per cent. in southern Illinois.

The June 20 condition of lambs is 99 per cent. of an average.

CALVES.

Fewer calves are reported this year than last, by 8 per cent. In northern and southern Illinois the number as compared with last year is 93 per cent., and in central Illinois it is 89 per cent.

The June 20 condition of calves is 98 per cent. of an average in each division of the State.

COLTS.

A very small number of colts is reported this year as compared with last, only 75 per cent. In northern Illinois the number is but 71 per cent., in central Illinois 72 and in southern Illinois 83 per cent.

The June 20 condition of colts is 97 per cent. of an average.

In the northern grand division the value of colts at weaning time is $20; in the central division $22, and in the southern division $26.

Seven per cent. of the colts foaled in Illinois this year died before weaning time.

The average cost of service in northern and central Illinois is $10, and $9 in the southern division.

WOOL.

The loss of interest in sheep production is noticeable in the wool product, the 1894 clip being 93 per cent. of that of 1893 in northern Illinois, 88 per cent. in central and 91 per cent. in the southern division of the State.

DISEASE.

The only complaint of disease among live stock comes from Kane county, where several cows have died the last month. They first refuse food and drink; then fever sets in and they become weak and have spasms. About the fourth day they die. Post-mortem examinations show that the first stomach is congested with food and apparently mortifying. Powerful cathartics administered to diseased animals produced no effect.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

ILLINOIS CROP REPORT,

—FOR—

AUGUST 1, 1894.

Synopsis of the Reports of Correspondents as to the Condition and Yield of Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, August 1, 1894.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first day of August.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large number of the correspondents have been reporting to this Department for the past eighteen years, and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The correspondents number nearly six hundred and are so distributed over the State so as to fairly represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WHEAT.

Of the 2,071,354 acres seeded to wheat this season, so small a portion was winter-killed or otherwise destroyed, that it was not thought worth while to take it into account in making up the estimate of the wheat crop of the State. This is the largest wheat area reported in Illinois since 1888. The area devoted to wheat in each of the grand divisions of the State was as follows: Northern division, 113,899 acres; central division, 952,817 acres; southern division, 1,004,638 acres. Of this area 2,029,034 acres was winter wheat, and 42,320 acres spring wheat.

That the season was exceptionally favorable for the growth and harvesting of wheat, was proved by the immense crop of 41,315,099 bushels, a product which has been exceeded but three times in the statistical history of the State, in the years 1879, 1880, and 1882.

The yield of wheat in northern Illinois was 2,391,757 bushels; in central Illinois, 20,766,232 bushels, and in the southern division of the State, 18,157,110 bushels.

The average yield per acre of 20 bushels has never been exceeded, there being 21 bushels per acre reported from northern Illinois; 22 bushels in central Illinois, and 18 bushels in southern Illinois.

The quality of the berry is excellent, but little injury of any kind having occurred.

It was feared for a time that the chinch bugs had injured wheat to a considerable extent, but the outcome has shown that this was an erroneous supposition, and but few counties make any mention of them since harvest.

In the counties of Carroll, Cook, Lake, Marshall, Morgan and Sangamon, a little damage from bugs is reported, and there is some smutty wheat in Gallatin, Monroe, Saline and Wabash counties, but on the whole the quality of wheat this season is above an average.

The low prices prevailing this season are very discouraging to wheat growers, the value of the wheat crop of the State, at the ruling price to the producer August 1, 43 cents per bushel, amounting to but $17,841,353.

The following table gives the area, yield and value of the wheat crop of the State during the last thirty-five years:

WHEAT—(Spring and Winter).

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.

† 1860–1881 estimated same as reported for 1880.

If the area seeded to wheat this fall is as large as last year, it will require 2,761,809 bushels, at the rate of 1⅓ bushels per acre for seed, and allowing 4 bushels per capita for food, on the population according to the census of 1890, which will take 15,271,328 bushels more, making a total of 18,033,137 bushels needed for seed and consumption in the State, there will be a surplus for export of 23,281,962 bushels.

OATS.

Notwithstanding the gloomy reports of the oats crop received through the growing season, harvest reveals the fact that the 1894 crop is one of the largest ever known in Illinois, those in 1888 and 1889 alone taking precedence of it in the number of bushels produced.

The area reported, 3,424,422 acres, has been exceeded but three times, in 1887, 1888 and 1889, and the unusually large average yield of 39 bushels per acre makes the oat crop amount to 133,479,742 bushels. The yield was quite uniform in northern and central Illinois, where the average was 40 and 42 bushels per acre, respectively, but in southern Illinois the yield was much smaller, the average being but 26 bushels per acre.

The average price per bushel, 28 cents, is much better than last year, and somewhat higher than the ruling price on August 1 for a term of years. The large crop and the good price combine to make the value of this cereal the greatest but one ever produced in the State, it amounting to $36,856,979.

Although chinch bugs are reported as injuring oats in the counties of Carroll, Ogle, Rock Island, Hancock, Morgan and Sangamon, and in Pope county a louse injured them by sucking the juice from the grain, it is not thought that any material damage resulted from either cause.

The following table gives the area, yield and value of the oat crop of the State during the past thirty-five years:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.

† 1860–1881 estimated same as reported for 1880.

A table published elsewhere in this report gives the area, yield and value of the oat crop in each county in the State this year.

RYE.

There is a very slight increase in the area of rye this season over that of last year, 126,019 acres being reported.

The average yield per acre of 19 bushels is larger by 5 bushels than the yields of 1892 and 1893, and the total product again reached the two million limit, below which it fell last year, for the first time in twenty-five years.

The total amount of rye raised in Illinois was 2,375,780 bushels.

The average price per bushel of 38 cents is below the average so that the value of the crop, although exceeding that of last year, is below the average. The value of the rye crop of Illinois this year, at the ruling prices August 1, was $918,544.

The following table gives the area, yield and value of the past thirty-five rye crops grown in the State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	59,455	16	951,281	$0 49	$466,127	$7 87	$9 80	$582,659		$116,532

† 1860-1881 estimated same as reported for 1880.

A table published elsewhere in this report gives the area, yield and value of rye in each county in the State.

BARLEY.

There is an increase in the area devoted to barley this season as compared with last, of 558 acres, there having been 20,464 acres reported as the 1894 area. The average yield per acre of 25 bushels is larger than that of last year, and the total yield of 527,771 bushels is larger than that of either of the two preceding years.

The average price per bushel was 42 cents, the value of the crop amounting to $220,130.

Comparatively little barley is raised in this State, and of that little, all but a very small portion is raised in northern Illinois.

The following table gives the area, yield and value of the past thirty-five barley crops produced in this State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	†Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	45,058	23	1,036,334	$0 49	$507,803	$11 26	$10 55	$475,362	$32,441

† 1860-1881 estimated same as reported for 1880.

In a table published elsewhere in this report will be found the area, yield and value of the barley crop of the State by counties.

HAY.

A very slight decrease is noted in the area of meadows this season, there being 2,787,218 acres reported. Owing to the damage done meadows by the cold snap in March, and the dry weather before harvest, the yield of hay was unusually small, only 1.18 tons per acre. The total yield was 3,285,407 tons.

The dry weather was very favorable for harvesting, and hay was saved in excellent condition, and was worth to the producer $7.50 per ton. The total value of the hay crop August 1 was $24,581,760.

No reports of damage to meadows by insects have been received, and the quality of the hay is, generally speaking, very fine.

The following table gives the area, yield and value of the past thirty-five hay crops of the State:

Year.	Number of acres.	Average yield per acre—tons.	Tons produced.	Price per ton.	Total value.	Value per acre.	†Cost of production per acre	Total cost of production.	Profit	Loss.

† 1860–1881 estimated same as reported for 1880.

The area, yield and value of the hay crop of 1894 for each county in the State is given in a table published elsewhere in this report.

FLAX.

Only twelve counties report any flax within their borders this year, of which eight are in the northern division of the State, two in the central and two in the southern division, the total area being but 391 acres. Eight bushels of seed per acre was produced, or 3,128 bushels altogether.

The average price per bushel was $1, and the producer received the sum of $3,128 for his crop.

The following table gives the area, yield and value of the last sixteen crops of flax grown in the State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.

A table published elsewhere in this report gives the area, yield and va'ue of flax-seed in each county in which it is raised.

CORN.

The area devoted to corn this year, 6,705,178 acres, is 288,690 acres larger than in 1893, and is the largest area reported in Illinois since 1889.

Although the long continued drought has been very disastrous to corn, the extra good condition it was in before the drought began carried it through much better than often happens, and it is believed that the gloomy reports in regard to corn have been greatly exaggerated so far as Illinois is concerned.

Rain in considerable quantities fell in many parts of the State on July 28 and 29, which in many cases was the salvation of the corn crop. High winds accompanied the rain in some localities, and corn was badly blown down, but not so seriously but that it straightened up again in most cases.

The damage done to corn by chinch bugs is also considerable, these pests having been reported from the counties of Carroll, Lake, Ogle, Christian, Clark, Cumberland, Hancock, Macon, Macoupin, Mason, Menard, Montgomery, Morgan, Pike, Sangamon, Bond, Clay, Clinton, Edwards, Effingham, Fayette, Franklin, Hamilton, Jasper, Jefferson, Perry, Randolph, Richland, Saline and Wayne.

In many localities in the State, the ground at planting time was in such fine condition and the seed of such superior quality that every grain germinated, and as a consequence the stand is too thick to make as heavy a growth as might otherwise have been expected.

Corn is reported as "fired" in the counties of Henderson, LaSalle, Livingston, Ogle and Adams.

The August 1 condi ion of corn is encouraging for 75 per cent. of an average yield per acre.

The poorest reports come from northern Illinois, where the condition is but 69 per cent. of a seasonable average, and is 14 points below the 1893 condition for the same date.

In central Illinois the August 1 condition is favorable for 84 per cent. of an average yield per acre, or 3 points better than in 1893.

In the southern division of the State 73 per cent. of an average August 1 condition is reported, 2 points below the same date last year.

A table published elsewhere in this report gives the area of corn in each county in the State in 1893 and 1894, and also the August 1 condition for twelve years.

BROOM CORN.

Although a little broom corn is raised in northern and southern Illinois, the great bulk of it comes from a few counties in the central portion of the State, where the August 1 condition is encouraging for nearly a full average yield per acre—9[illegible] per cent. In northern Illinois 89 per cent. of an average yield per acre is expected, and in southern Illinois 75 per cent.

The August 1 condition of this crop over the entire State is 83 per cent. of a seasonable average.

SORGHUM.

The August 1 condition of sorghum is encouraging for 81 per cent. of an average yield per acre. In northern Illinois the condition is 77 per cent. of an average; in central Illinois 87 per cent., and in the southern division 76 per cent. of an average.

PASTURES.

The August 1 condition of pastures has not been so poor for many years as this season, when they are only 49 per cent. of a seasonable average.

The lowest condition is reported from the northern grand division of the State, where they are but 41 per cent. of a seasonable average. In central Illinois their condition is 10 points better, 51 per cent., and in the southern portion of the State they are 5[illegible] per cent. of an average.

The drought last summer was very hard on pastures and they were cropped very close, and had not regained their normal condition when this season's drought overtook them, and as a consequence they are almost burned up.

In a great many counties in northern Illinois, and in some in other portions of the State, farmers have been feeding stock, more particularly dairy cows, for some time, and in some sections they have had to haul water for stock.

The area in pastures this year, 5,064,305 acres, is 109,434 acres larger than the area reported for 1893.

IRISH POTATOES.

Potatoes, in common with most other vegetation, have suffered severely from the drought this summer, there being a depreciation of 25 per cent. in their condition since June 20.

The August 1 condition is encouraging for but 64 per cent. of an average yield per acre. The most unfavorable condition is in northern Illinois, where but 45 per cent. of an average yield per acre is now expected. In the central division of the State 69 per cent., and in the southern division 79 per cent. of an average yield per acre is anticipated.

SWEET POTATOES.

Sweet potatoes, although not so important a crop in Illinois as Irish potatoes, are yet grown to a considerable extent in some sections, and their August 1 condition is encouraging for nearly three-fourths of an average yield per acre, 73 per cent.

In the northern division of the State the August 1 condition is but 64 per cent. of a seasonable average, but in central Illinois it is 78 per cent., and in the southern grand pivision 70 per cent of an average.

BUCKWHEAT.

The area devoted to buckwheat this year is 18 per cent. less than the area of 1893. In northern Illinois the decrease is 22 per cent., and in both the central and southern divisions 15 per cent.

Only 64 per cent. of an average yield per acre may be expected. In the northern division only half as much per acre is expected, but in the other sections of the State the August 1 condition is 71 and 77 per cent. of a seasonable average.

TURNIPS.

Almost as large an area as last year was devo ed to turnips and other root crops this season, in spite of the fact that it was so very dry just at the time that turnip seed should be planted. The area as compared with last year is 92 per cent.

The condition of these crops is poor, only 72 per cent. of a seasonable average. In many cases a great deal of the seed failed to germinate, owing to the dry weather, and Adams county reports a complete failure.

The August 1 condition in the northern, central and southern divisions of the State is 62, 76 and 79 per cent. respectively.

TOBACCO.

The August 1 condition of tobacco is encouraging for 71 per cent. of an average yield per acre in northern Illinois, 91 per cent. in central and 80 per cent. of an average yield per acre in southern Illinois.

CASTOR BEANS.

Of the five counties making reports on this crop in the northern grand division of the State, the average condition is 58 per cent., but in southern Illinois the prospect is encouraging for 82 per cent. of an average yield per acre.

FIELD PEAS.

Sixty-eight per cent. of an average yield per acre of field peas is anticipated in the northern division of the State, 72 per cent. in the central division and 82 per cent. in the southern.

FIELD BEANS.

The August 1 condition of field beans is encouraging for but 66 per cent. of an average yield per acre in northern Illinois, but in the central division 81 per cent., and in the southern division 8 per cent. of an average yield per acre is anticipated.

FRUIT.

APPLES.

Once more the apple crop of Illinois may be written down a practical failure, although in northern Illinois 60 per cent. of an average crop, and in central Illinois 43 per cent. of an average crop is now thought likely, but in the southern division of the State, where over half the apples are produced, only 8 per cent. of a crop is anticipated, making the State average 37 per cent. In but two counties in southern Illinois is the August 1 condition over 25 per cent.—in Bond county where it is 29 and Clinton 55 per cent.

PEACHES.

Peaches are a total failure this season, and that is about all that can be said about them.

PEARS.

Pears are somewhat more promising, but even they will not be a full crop by any means, only 28 per cent. of an average crop.

In northern Illinois the August 1 condition is encouraging for 48 per cent. of a crop; in central Illinois for 33 per cent., and in southern Illinois for 11 per cent. of a crop.

PLUMS.

In the northern grand division of the State 80 per cent. of an average crop of plums may be expected, and in central Illinois 38 per cent., but in the southern division only 6 per cent. of a crop is expected. The greater part of the counties report an entire failure. The State average is for 33 per cent. of an average crop.

QUINCES.

Only three counties in northern Illinois make a report on this fruit, their average being 65 per cent. In central Illinois the August 1 condition varies from a fair seasonable average to a total failure, the average for the division being 34 per cent., while in the southern division of the State only 12 per cent. of an average crop is anticipated.

GRAPES.

It is gratifying, in this year of fruit scarcity, to find one kind which promises anywhere near an average yield. This is the case with grapes, of which three-fourths of an average crop is expected. The condition of the fruit August 1 is very uniform throughout the State, northern and central Illinois reporting it to be in 75 per cent. of an average condition, and southern Illinois 73 per cent. of an average. In Fayette county grapes are reported as rotting badly, and it is said it does not yield to spraying as readily as it did last year, but the condition in this county is given as 78 per cent. of an average.

BLACKBERRIES.

There was a prospect for an immense crop of blackberries early in the summer, but the dry weather caught them and as a consequence but little over half an average crop—55 per cent.—was realized. In northern Illinois there was only 47 per cent. and in central Illinois 40 per cent. of an average crop, but in the southern division of the State, where the berries mature earlier, 76 per cent. of a crop was obtained.

LIVE STOCK.

Stock has suffered a good deal on account of the drought, as pastures have been so short as to afford them scarcely any food, and many farmers have had to feed for weeks, and in many cases carry water for stock also. In consequence of this state of affairs, stock of all kinds is thin in flesh, but very little disease is reported. A little horse distemper is reported in Knox, Peoria and Union counties. In Wayne county there have been a few cases of anthrax, and in Sangamon some cows have died from an unknown disease. A little hog cholera is also reported from Sangamon county, and in Ogle an epidemic seems to be taking some herds of pigs. In LaSalle county hogs are affected with something like kidney worm, which causes them to lose the use of their hind legs.

DRAIN TILE.

During the year 1893, 26,984,814 feet of drain tile were laid in this State. Of this amount 18,309,884 feet were laid in northern Illinois, 8,606,689 feet in central Illinois, and 68,241 feet in Southern Illinois.

In the northern division of the State there is an average of 28 feet of tile to each acre of cultivated land, in central Illinois 29 feet, and in southern Illinois only 1 foot.

Donglas county has the largest number of feet per acre, 83, but Livingston is a close second with 78 feet.

In many counties in southern Illinois less than 1 foot per acre has been laid.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

ILLINOIS CROP REPORT,

—FOR—

DECEMBER 1, 1894.

Synopsis of the Reports of Correspondents Upon the Yield of the Principal Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE,
SPRINGFIELD, December 1, 1894.

The information contained in this report as to acreage of crops and number of head of live stock was obtained from the reports of assessors made to this Department as required by law.

The data in regard to yield per acre, price of crops and value of crops and live stock was obtained from crop correspondents, who number nearly six hundred, and represent every section of the State.

The correspondents are, as a rule, representative farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large number of the correspondents have been reporting to this Department for the past eighteen years, and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER GRAIN.

WHEAT.

The area seeded to wheat this fall, 1,882,233 acres, is 7 per cent. less than the 1893 area, when 2,028,937 acres was seeded.

In both northern and central Illinois the decrease was 12 per cent., giving 66,064 acres in the northern grand division, and 834,533 acres in the central division. In southern Illinois the decrease was but 2 points below last year, and the area seeded was 981,636 acres, more than half the entire wheat area of the State.

It is rather surprising that the decrease in area is not greater, when the low price of wheat is considered, but in those sections of the State largely devoted to this crop farmers seem loth to change to other crops, even when they seem to promise better returns for their labor.

Owing to the unusually dry weather of the summer, the ground, while in fine workable condition, was too dry for rapid germination of the seed, and the growth of the plant has consequently been slow, and it is not as large as is usual at this date. Reports of injury by drouth were almost universal, but the rains of November 29 and 30 have proved very beneficial and no serious damage is now thought to have been done.

Hessian fly is reported in the wheat in the counties of Edgar, Schuyler, Effingham, Jasper, Lawrence, Randolph, Richland and Wayne, but it is too early to estimate the injury from this cause.

Many inquiries have been made of this Department as to the quantity of wheat being fed to live stock, especially hogs, by the farmers throughout the State. An investigation of this subject shows that so little wheat has been thus consumed that it is not worthy of mention in a report so general in its character as our crop reports. In only two counties, Grundy and Madison, have the reporters made any mention of such feeding. The former county does not raise enough wheat for home consumption, much less a quantity sufficient to justify feeding to live stock. In Madison the feeding was nothing more than an experiment.

The December 1 condition of wheat, as reported by crop correspondents, was 97 per cent. of an average in Northern Illinois, 92 per cent. in the central, and 81 per cent in the southern division of the State.

RYE.

The area in winter rye is 6 points less this year than last, when 125,658 acres was reported by assessors, making the 1895 area 118,679 acres.

The decrease is entirely in the northern division of the State, where only 93,562 acres was seeded this year, against 100,739 acres in 1894. In the central division of the State, the area is practically unchanged, there being 18,699 acres reported, and in southern Illinois there is an increase of 2 points, the area being 6,418 acres.

The dry weater has retarded the growth of rye as well as wheat, and the plant is rather small for this date, but is healthy.

In JoDaviess county it is said that experiments have been made in using ground rye for hog and horse feed, but to so small an extent that it is difficult to estimate the results as yet.

The December 1 condition of winter rye was 93 per cent. as compared with an average in northern Illinois, 96 per cent in central, and 90 per cent. in southern Illinois.

CORN.

Although grave fears were entertained by many early in the season as to the outcome of this, Illinois' greatest farm product, on account of the drouth, the result shows that the damage was not nearly so great as was anticipated. The area of the crop planted, 6,705,476 acres, is the greatest since 1889, and exceeds the 1893 area by nearly 300,000 acres; of this area, 3,009,027 acres, was in northern Illinois, 2,709,540 acres in central Illinois, and 886,909 in the southern division of the State.

The average yield per acre of 31 bushels is larger than in 1892 and 1893. In the northern division of the State 31 bushels per acre was the average yield, and in the central division 35 bushels, while in southern Illinois only 18 bushels per acre was harvested In five counties in this division, Bond, Clinton, Fayette, Jefferson and Marion, the corn crop was almost a failure, there being less than 10 bushels an acre produced.

The total product of 205,637,061 bushels is 37,949,090 bushels larger than the 1893 product. The increase in product in 1894 was 17,638,000 bushels in northern Illinois, and 22,900,000 bushels in central Illinois, but in the southern division of the State there was a deficit of 2,589,000 bushels compared with 1893.

The ruling price of corn December 1 was 39 cents per bushel, the highest price received since 1890. Corn sold at 40 cents per bushel in the northern division of the State, making the value of the crop in that section $37,602,791. In the central division 37 cents per bushel was the average price, and the value of the crop amounted to $35,636,703. In southern Illinois 36 cents per bushel was the average, and the crop was worth $6,365,859. Had the entire corn crop of the State been sold at the prices prevailing December 1, it would have returned to the producers $79,605,353.

Great damage was done to the crop in southern Illinois by chinch bugs, which invaded the corn fields after wheat harvest. The drought was also most severe in this portion of the State, where much of the soil on the uplands is thin and not fitted to sustain much life during a dry season. In counties where the corn crop was almost a failure, the difference in the yield on upland or prairie soil, and in the bottom lands is noted.

While the quality of the corn this year is very near an average in both northern and central Illinois, being 93 and 95 per cent., respectively, in southern Illinois it is quite inferior, being but 68 per cent. of an average. The same causes which reduced the yield also lowered the quality, and a good deal of light, chaffy corn is reported, and in sections in which the chinch bugs were especially numerous, the ears are not well filled out.

The long, dry autumn was excellent for ripening and harvesting corn, and but little immature, soft or rotten corn is reported.

The area, yield and value of the corn crop of the State for the past thirty-five years is given in the following table:

YEAR.	Number of acres.	Average yield per acre.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	3,839,159	30	115,174,770	42½	$48,944,277	$12 74	$10 50	$40,311,169	$8,633,108

BROOM CORN.

There was increase of 684 acreas in the area of broom corn in 1894 over that of 1893, the area reported being 28,042 acres, which was the largest area reported since 1889.

Nearly seven-eighths of the area of this crop is situated in the central division of the State, and in the five counties of Coles, Cumberland, Douglas, Edgar and Moultrie, the other counties paying very limited attention to its cultivation. Coles and Douglas counties alone produce over half the broom corn raised in the State.

In northern Illinois Henry county reports an area of 3,300 acres, and Knox and Mercer report 416 and 251 acres respectively. In southern Illinois only two counties, Jasper and Lawrence, report over 100 acres in this crop.

The yield per acre of 716 pounds does not vary greatly from that of average years, one-third of a ton being a fair average yield. The total product of 20,074,000 pounds has not been equalled since 1890.

The price of broom corn, $89 per ton, is nearer the normal than last year, when the price was unusually low. At the ruling price December 1, the broom corn crop of the

State should have returned to the producer $889,459, and when it is considered that fully three-fourths of this amount was produced in six counties, the value of the crop to the producer is evident.

The following table gives the area, yield and value of the broom corn crop of Illinois since 1876:

YEAR.	Acreage.	Av. yield per acre—lbs.	Total yield—lbs.	Price per ton.	Value of crop.
1877	14,566	458	6,674,747	$71 20	$237,594
1878	18,258	614	11,218,168	49 50	277,645
1879	17,664	632	11,161,238	86 75	484,195
1880	18,652	775	14,457,156	77 40	559,447
1881	17,887	1,437	25,708,250	128 50	1,651,739
1882	43,036	225	9,693,187	80 00	387,680
1883	33,922	1,000	33,922,000	90 00	1,481,710
1884	25,173	750	16,228,000	72 00	585,572
1885	17,382	666	10,514,000	94 00	434,932
1886	37,633	526	19,914,000	78 00	776,963
1887	35 022	803	28,132,000	69 00	973,864
1888	41,807	672	28,116,000	57 00	797,245
1889	29,393	563	16,546,000	68 00	567,053
1890	27,591	1,020	28,152,000	64 00	904,311
1891	15,875	576	9,138,000	117 00	532,985
1892	18,333	587	10,756,000	94 00	508,699
1893	27,358	646	17,668,000	57 00	501,678
1894	28,042	716	20,074,000	89 00	889,459

SORGHUM.

Although there was not quite so large an increase in the area of sorghum this year as last, 1,456 acres more were reported than in 1893.

In northern Illinois 1,486 acres were planted, in central Illinois 3,280 acres, and in southern Illinois 6,404 acres, making a total of 11,170 acres.

The average yield per acre of 79 gallons was above that of the past two years, and the total product of 886,752 gallons is the largest since 1889. Of this amount 119,050 gallons was produced in the northern division of the State, 284,685 gallons in the central and 483,017 gallons in the southern division.

The price per gallon of 39 cents is the lowest received for a number of years. The total value of the crop was $346,285, of which $54,509 is to be credited to northern Illinois, $119,509 to central and $172,267 to southern Illinois.

The following table gives the area, yield and value of the sorghum crops produced in the State since 1876.

YEAR.	Acreage.	Av. yield per acre—gals.	Total number of gals.	Price per gal.	Value of crop.
1877	19,335	63	1,237,164	$0 42	$515,409
1878	14,638	80	1,174,549	45	528,547
1879	17,883	73	1,309,400	38	497,572
1880	9,825	65	636,216	42	267,211
1881	8,263	55	456,714	55	251,193
1882	13,757	61	816,892	50	408,446
1883	14,023	90	1,272,287	50	604,157
1884	13,854	100	1,389,243	45	631,270
1885	13,890	92	1,289,426	40	519,622
1886	12,637	81	1,021,855	38	393,497
1887	11,231	60	673,736	46	309,098
1888	11,447	101	1,160,474	37	429,120
1889	10,352	93	966,097	37	353,883
1890	8,712	87	758,944	43	326,720
1891	6,980	90	629,709	41	256,909
1892	4,483	71	318,323	46	146,103
1893	9,714	68	660,629	43	283,519
1894	11,170	79	886,752	39	346,285

BUCKWHEAT.

The area devoted to buckwheat this year, 3,151 acres, is nearly 400 acres smaller than that of 1893, but the average yield per acre of 17 bushels makes the product 53,964 bushels, an increase of nearly 6,000 bushels as compared with last year.

The average price received was 58 cents per bushel, and the total value is $31,491.

The following table gives the area, yield and value of the buckwheat crop in this State for the past eighteen years:

YEAR.	Acreage.	Av yield per acre.	Bushels produced.	Price per bushel.	Value of crop.
1877	15,880	13	207,693	$0 73	$151,612
1878	16,060	9	155,340	1 33	206,608
1879	10,786	10	112,180	77	85,257
1880	6,681	9	62,128	77	47,838
1881	8,648	4½	16,374	1 12	18,329
1882	2,469	25	63,743	77	49,838
1883	3,491	14	49,397	85	41,800
1884	3,526	17	58,641	64	37,864
1885	4,318	15	66,874	64	43,174
1886	4,830	13	64,136	56	36,256

1893	3,541	13	48,000	61	29,344
1894	3,151	17	53,964	58	31,491

TIMOTHY SEED.

Twenty per cent. more timothy seed was raised in Illinois this year than last, there being 142,817 bushels produced.

But once since 1876 has the price of timothy seed ruled so high as this year when it returned to the producer $2.30 per bushel. If the entire crop had been sold at this price

the value to the farmer would have been $329,608, a larger amount than this crop has been worth for a number of years.

The following table gives the amount and value of the crop in the State since and including 1877:

YEAR.	Bushels produced.	Price per bushel.	Total value.
1877	483,571	$1 25	$604,464
1878	261,559	1 25	326,949
1879	213,329	2 25	479,990
1880	400,124	2 20	880,272
1881	426,531	2 60	1,108,980
1882	320,653	1 68	538,697
1883	358,895	1 35	476,447
1884	389,056	1 30	512,438
1885	167,456	1 55	258,376
1886	179,178	1 65	294,803
1887	139,551	2 25	311,421
1888	134,006	1 70	224,651
1889	323,763	1 35	434,300
1890	182,635	1 25	232,277
1891	170,181	1 20	208,069
1892	113,675	1 70	192,676
1893	113,566	1 85	211,390
1894	142,817	2 30	329,608

CLOVER SEED.

The increase in the production of clover seed in 1894 is even greater than that of timothy, there having been 27 per cent. more clover seed raised this year than last. The amount of clover seed produced this year was 147,300 bushels.

The price per bushel, $5.05, is 25 cents less than was received in 1893, but the value of the crop, even at this price, $741,820, is the greatest since 1887, which is the only year since 1876 when the value of the clover seed crop was greater than this year.

A table published elsewhere in this report gives the number of bushels of clover seed produced in Illinois in 1894, together with the value of the crop.

In the following table will be found the yield and value of the crop of clover seed for 1894, as well as for the seventeen years preceding:

YEAR.	Bushels produced.	Price per bushel.	Total
1877	64,686	$4 80	$310,493
1878	77,388	4 05	313,421
1879	138,191	5 00	690,955
1880	87,144	4 60	400,862
1881	125,042	5 20	650,218
1882	55,862	5 00	279,310
1883	78,656	4 75	375,066
1884	138,920	4 40	609,945
1885	72,969	5 00	365,523
1886	122,612	4 30	524,271
1887	180,267	4 15	747,982
1888	122,906	4 60	563,412
1889	78,005	3 15	245,695
1890	191,59	3 80	729,638
1891	74,729	4 05	303,756
1892	62,931	6 05	382,045
1893	107,829	5 30	572,608
1894	147,300	5 05	741,820

HUNGARIAN AND MILLET SEED.

These crops do not meet with the same favor in Illinois that timothy and clover seed do, and for a number of years the production has steadily decreased, the crop this year being the smallest ever reported in the State except that of 1877. The hungarian and millet seed crop of 1894 in Illinois amounted to 19,728 bushels, which, at the prevailing price December 1, was worth to the producers $13,970.

The following table gives the yield and value of this crop since 1876.

YEAR.	Bushels produced	Price per bushel.	Total value.
1877	17,463	$0 65	$10,701
1878	26,787	55	14,733
1879	43,776	75	32,832
1880	66,889	70	46,752
1881	76,180	95	72,370
1882	77,423	60	53,422
1883	70,007	62	43,201
1884	33,513	51	17,187
1885	22,203	60	13,418
1886	32,175	54	17,553
1887	39,049	65	25,385
1888	55,388	63	35,126
1889	154,468	49	75,944
1890	39,188	63	24,668
1891	34,258	67	22,904
1892	21,993	66	14,627
1893	20,448	78	16,053
1894	19,728	71	13,970

BEANS.

There was a slightly larger area planted to beans in this State in 1894 than in 1893, 1,731 acres being reported by assessors, but the average yield per acre of 11 bushels was so small that the total product was less than that of last year.

The 1894 crop amounted to but 19,355 bushels.

It is five years since so low a price for beans as this year, $1.75 per bushel was reported.

The value of the crop at this price was $34,207.

The following table gives the area, yield and value of the 1894 crop of beans, together with those of seventeen years preceeding;

YEAR.	Acreage.	Av. yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	1,545	13	19,955	$1 50	$29,916
1878	1,659	16	18,627	1 35	25,146
1879	2,674	14	36,217	1 50	53,225
1880	1,398	11	15,894	1 60	25,430
1881	1,012	3	3,267	3 30	10,681
1882	983	9	9,776	2 22	21,103
1883	1,091	14	15,738	2 00	31,374
1884	1,621	13	21,335	1 55	33,017
1885	2,660	17	44,457	1 45	64,908
1886	1,222	16	17,785	1 60	28,806
1887	1,923	12	23,151	2 15	49,983
1888	2,434	14	34,651	1 60	54,776
1889	2,207	13	28,678	1 45	41,543

1891	1,023	22	22,422	1 95	43,826
1892	859	18	15,540	1 85	28,864
1893	1,708	12	20,621	1 90	38,867
1894	1,731	11	19,355	1 75	34,207

CASTOR BEANS.

Of the 7,658 acres planted to castor beans this year, 6,886 acres were in the southern division of the State. Northern Illinois reported 645 acres, while in central Illinois only 127 acres was planted.

The average yield per acre was small, only 6 bushels, and the total product was 44,831 bushels.

The average price per bushel, $1.15, is the same as last year, but the reduced acreage and small yield make the value of the crop but $51,695, nearly 50 per cent. less than the value of the 1893 crop.

In the following table is given the area, yield and value of the last eighteen crops of castor beans:

YEAR.	Acreage.	Av. yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	4,503	3¼	17,538	$1 10	$18,512
1878	371	7	2,526	1 25	3,157
1879	3,085	8 1-5	24,314	1 00	23,344
1880	500	6 4-5	3,480	1 05	3,654
1881	758	5¼	4,005	1 65	5,608
1882	2,088	2½	4,346	1 26	5,476
1883	433	8	3,464	1 35	4,688
1884	1,108	17	19,295	1 60	30,794
1885	3,825	12	46,283	1 65	76,297
1886	19,374	7	136,518	1 30	175,211
1887	14,978	7	95,721	1 00	95,596
1888	10,981	7	78,813	1 30	103,303
1889	9,631	8	78,283	1 80	141,180
1890	7,298	8	62,259	1 50	93,919
1891	5,761	6	37,151	1 50	55,398
1892	5,292	6	33,961	1 40	47,666
1893	40,014	9	89,712	1 15	102,959
1894	7,658	6	44,831	1 15	51,695

TOBACCO.

As with castor beans, so with tobacco, by far the greater part of it is raised in the southern division of the State. Of the 4,444 acres reported in 1894, 4,119 acres are in this section, while northern Illinois has 250, and central Illinois 75 acres.

The yield per acre of 648 pounds is rather below the average, but the total yield of 2,882,160 pounds has not been equalled since 1888.

Seven cents per pound was obtained for the crop, a fair average price, and the total value of the tobacco raised in Illinois this year was $201,054.

A table published elsewhere in this report gives the area, yield and value of tobacco in each county where it is raised.

The following table gives the area, yield and value of the crop in this State since 1876:

YEAR.	Acreage.	Av. yield per acre—pounds.	Pounds produced.	Price per pound.	Value of crop.
1877	12,320	640	7,885,586	$0 08	$638,848
1878	3,833	584	2,268,492	07	158,794
1879	3,079	890	2,741,329	09	246,719
1880	4,091	668	2,736,407	08	218,912
1881	3,854	453	1,749,474	08	139,798
1882	3,798	622	2,345,931	07	164,215
1883	3,092	710	2,195,426	06	140,920
1884	4,842	767	3,716,408	09	321,582
1885	7,028	802	5,634,066	05	310,922
1886	10,365	745	7,719,704	04	313,714
1887	2,705	544	1,471,528	05	76,538
1888	4,107	800	3,287,017	04	133,576
1889	2,923	768	2,244,199	05	105,059
1890	1,416	1,118	1,583,046	09	138,282
1891	781	887	692,747	07	50,480
1892	849	942	799,543	08	64,003
1893	3,329	751	2,499,225	07	168,915
1894	4,444	648	2,882,160	07	201,054

PASTURES.

The area in pastures this year, 5,052,952 acres, is slightly larger than a year ago. The largest area in pastures is in the northern portion of the State, where the immense dairy interests demand a corresponding amount of pasture land. The area in this section was 2,638,678 acres, in central Illinois 1,722,004 acres, and in the southern division of the State 692,270 acres.

There is quite a difference in the value of pasturage in the different sections of the State, northern Illinois estimating it at $3.50 per acre, central Illinois at $3.55, and southern Illinois at $2.80 per acre.

The value of pasturage this year amounted to $17,312,260.

A table published elsewhere in this report gives the area and value of pastures in each county in the State.

The following table gives the area and value of pastures for eighteen years past:

YEAR.	Acreage.	Value per acre.	Total value.
1877	4,367,603	$3 38	$14,764,112
1878	3,983,450	3 10	12,324,657
1879	4,193,884	2 95	12,319,620
1880	4,257,054	3 40	14,491,114
1881	2,206,621	3 40	14,397,176
1882	4,697,966	3 75	17,578,690
1883	4,752,828	3 60	17,073,741
1884	5,085,817	3 80	19,241,247
1885	5,417,147	3 25	17,729,714
1886	5,537,873	3 45	19,248,836
1887	5,630,571	3 10	17,327,126
1888	5,796,935	3 85	22,259,067
1889	5,679,874	3 30	18,862,811
1890	5,083,438	3 60	17,835,590
1891	4,681,972	3 65	17,148,320
1892	4,338,899	3 65	15,806,775
1893	4,954,871	3 40	16,939,914
1894	5,052,952	3 45	17,312,260

VEGETABLES.

IRISH POTATOES.

The area devoted to Irish potatoes this year, 114,756 acres, is nearly 15,009 acres larger than that of 1893. Of this area, 56,113 acres was in the northern division of the State, 21,020 acres in the central, and 37,623 acres in the southern division.

The average yield per acre was 57 bushels. In northern Illinois, where there was the largest acreage, the yield was very small, only 48 bushels per acre; in central Illinois 64 bushels per acre were produced, and in the southern portion of the State 66 bushels. The total Irish potato crop of Illinois in 1894 amounted to 6,576,163 bushels, which was somewhat larger than the 1893 crop.

In northern Illinois 2,725,694 bushels were produced, 1,347,317 bushels in central and 2,503,152 bushels in southern Illinois.

Only 64 cents per bushel was received for this crop, and the value of the crop amounted to $4,183,411.

The following table gives the area, yield and value of the Irish potato crops of the State since 1859:

YEAR.	Number of acres.	Average yield per acre.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860	69,225	80	5,540,390	$0 31	$1,717,520	$24 80	$20 55	$1,422,574	$294,946

SWEET POTATOES.

A larger area was sown to sweet potatoes this year than for two years past, 3,456 acres. No sweet potatoes worth mentioning are raised in the northern portion of the State, only 123 acres being planted; in central Illinois 1,107 acres, and in southern Illinois 2,226 acres were planted. Ninety-five bushels per acre was the average yield. In northern Illinois 64 bushels per acre, or 7,901 bushels were raised; in the central division of the State 77 bushels per acre, or 85,321 bushels, and in the southern division of the State, 106 bushels per acre, or 235,704 bushels were produced. The entire sweet potato crop was 328,926 bushels.

The average price per bushel of 65 cents was rather below the average.

The value of the crop in northern Illinois was $7,301; in central Illinois, $74,055, and in the southern division of the State $131,769. The total value of the crop was $213,125.

A table published elsewhere in this report gives by counties the area, yield and value of the sweet potato crop of the State this year.

The following table gives the area, yield and value of the sweet potato crop of the State for the past eighteen years:

YEAR.	Acreage.	Average yield per acre—bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877	2,355	63	148,270	$0 85	$126,029
1878	1,729	67	116,944	85	99,402
1879	1,423	88	126,169	90	112,552
1880	3,382	66	224,523	90	202,070
1881	1,815	63	114,486	1 08	23,645
1882	2,785	77	216,283	80	173,020
1883	2,606	83	228,605	75	171,847
1884	2,681	103	276,304	67	184,077
1885	2,825	92	261,590	59	153,716
1886	3,306	87	286,505	59	197,401
1887	2,881	68	196,594	95	186,084
1888	3,231	100	323,906	69	224,743
1889	4,126	90	370,616	58	215,646
1890	2,492	91	226,319	93	207,580
1891	3,828	104	397,159	62	247,205
1892	2,903	91	263,537	83	219,927
1893	3,232	81	262,111	81	211,871
1894	3,456	95	328,926	65	213,125

TURNIPS AND OTHER ROOT CROPS.

The area devoted to root crops, exclusive of potatoes, in Illinois this year was 3,333 acres, a decrease of over 200 acres since 1893. The average value per acre of these crops was $69.35, and the total valuation $231,210. The average yield of turnips per acre was 140 bushels.

The following table gives the acreage and value of turnips and other root crops grown in the State during the past eighteen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877	7,056	$39 55	$279,136
1878	3,775	40 85	154,140
1879	3,139	230 15	722,444
1880	2,300	45 85	105,414
1881	3,046	147 20	448,369
1882	3,809	245 25	934,291
1883	4,361	205 75	897,304
1884	3,856	75 75	292,181
1885	3,002	83 50	257,387
1886	5,002	76 75	383,966
1887	2,592	81 20	210,432
1888	3,802	93 12	354,046
1889	4,509	118 42	533,950
1890	2,793	46 16	128,947
1891	5,208	39 40	207,780
1892	3,739	43 90	164,127
1893	3,575	94 10	336,385
1894	3,333	69 35	231,210

OTHER CROPS NOT NAMED.

Under this caption are included the numerous small crops which are raised to a limited extent in the State, including vegetables raised for market and canning purposes, and these miscellaneous items are combined elsewhere in this report in a table with the above heading.

The value of these crops in 1894 was but $67,484, less than half the value of the 1893 crops. Of this amount by far the greater part was produced in northern Illinois, where their value is given at $51,478; in central Illinois only $4,706 was obtained, and in southern Illinois, $11,300.

LIVE STOCK.

HOGS.

The number of hogs on hand May 1 was, according to the returns made by assessors, 3,029,537, a larger number than has been reported for two years past. At the equalized value of $1.43 per head, the value of this class of live stock amounts to $4,332,238. About 83 per cent., or 3,514,526 head of hogs were marketed in Illinois in 1894. The average gross weight of the hogs marketed was 223 pounds, the smallest weight reported since 1855, with one exception. This would seem to indicate that the farmers are learning that it pays to mature their hogs early, and put them on the market young, rather than feed them six months or a year longer and then receive a few dollars more for them. The total live weight of the hogs marketed was 561,352,002, which at the average price of $4.60 per cwt., returned to the feeders $25,647,761.

The supply of hogs on hand December 1 as compared with the same date last year is reported as 83 per cent. This seems large when the ravages of hog cholera this season are considered, but the reports from all of the counties are pretty uniform, so this proportion must be comparatively correct.

The price of hogs December 1, 1894, $4.05 per cwt. is much less than was reported a year ago.

Hog cholera is mentioned in the following counties, many of the correspondents stating that it was introduced by western hogs brought into their respective counties: Bureau, Henderson, Henry, Iroquois, Knox, LaSalle, Lee, Livingston, Marshall, Mercer, Ogle, Peoria, Putnam, Rock Island, Warren, Whiteside, Will, Woodford, Brown, Champaign, Christian, Clark, DeWitt, Douglas, Edgar, Ford, Fulton, Greene, Hancock, Jersey, Logan, Macon, Macoupin, Mason, McDonough, McLean, Menard, Morgan, Moultrie, Piatt, Pike, Sangamon, Schuyler, Scott, Tazewell, Vermilion, Crawford, Franklin, Johnson, Madison, St. Clair and Williamson. In many localities it has been very fatal.

The following table gives the number of hogs assessed and marketed in 1894, as well as their weight and value, for the last thirty-nine years:

YEAR.	Assessors' Returns.		Estimated per cent. marketed.	Number fat hogs marketed.	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Total value hog product.
	Number.	Value.						
1856	1,596,903	$3,375,247	70	1,117,832	262	292,871,984	$4 75	$13,911,420

CATTLE.

The number of cattle assessed last May, 1,798,417, was 14,507 less than was reported in 1893. The equalized value of $6.26 per head is less than last year. At this rate the total value of cattle in the State last spring was $11,258,090.

Twenty-three per cent. of the number assessed, or 413,628 were marketed up to December 1. The average live weight of those marketed was 1,086 pounds, making the total gross weight 449,405,291 pounds.

The price obtained $3.30 per cwt., was 10 cents less than that received a year ago. The total value of the beef cattle marketed was $14,941,299.

The number of dairy cows reported this year, 633,599, is considerably larger than last year, but the average value of $29 per head is less than in 1893, and the total value of $20,178,508 is also smaller than a year ago.

Of the dairy cows kept in this State, 64 per cent. are in the northern division, where great attention is given to dairying.

The supply of beef cattle on hand December 1, as compared with the same date last year, was 80 per cent.

A few cases of disease among cattle are noted, viz.: In McHenry and Ogle counties some cows have had milk fever; in Christian, Macon and Piatt counties, cattle on corn stalks have died; some think the cause to be smut, others ascribe it to the dry husks. In Pike county more lumpy jaw, so-called, than usual has prevailed, and in some localities in Johnson county cattle have died from kidney and bowel trouble. A little pink-eye is reported from Williamson county.

The following table gives the number, weight and value of the cattle marketed in the State since 1855:

YEAR.	Assessors' Returns.		Estimated per cent. marketed.	Number beef cattle marketed.	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Value beef cattle marketed.
	Number.	Value.						
1856	1,169,855	$15,572,065	20	233,971	1,000	233,971,000	4 75	$11,113,622

SHEEP.

There was a decrease in the number of sheep reported by assessors in 1894 from the 1893 report, the number assessed in 1894 being 826,200.

This class of live stock is very low this year, its equalized value being only 84 cents per head. At this rate the value of the sheep in the State is $698,008.

Of the whole number assessed, 22 per cent., or 181,756 were marketed. The average live weight was 99 pounds, and the total gross weight 17,995,380 pounds.

Never before has the ruling price of sheep been so low as this year, when an average price of but $2.55 per cwt. was received for them. The total value of the sheep marketed was $461,986.

No reports of disease among sheep have been made by correspondents.

The following table gives the number, weight and value of the sheep marketed in the State since 1855:

YEAR.	Assessors' Returns.		Estimated per cent. marketed.	Number fat sheep marketed.	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Value fat sheep product.
	Number.	Value.						
1856	786,433	$940,034	20	157,286	90	14,155,740	$3 50	$495,450

WOOL.

Wool shares with sheep the depreciation in amount and price, the 3,096,034 pounds of wool shorn in 1894 being much less than the clip of 1893, and the average price of 13 cents a pound is the lowest on record.

The total value of the wool clip of 1894 is but $390,791.

The following table gives the number of pounds shorn, the price per pound, and the total value of the wool clip for the last eighteen years:

YEAR.	Number pounds shorn.	Price per pound.	Total value.
1877	3,291,677	$0 30	$987,503
1878	2,891,087	25	722,752

1894	3,096,034	13	390,791

HORSES.

Not quite so many horses were reported in the State this year as last, there being only 907,704. The value of horses is very small. the equalized value being $14.87 per head, and the total value at this rate, $13,500,532.

Some disease among horses has been reported, principally distemper, which is noted in the following counties, viz: Livingston, Marshall, Douglas, Hancock, Schuyler, Johnson, Madison and Marion. In Williamson county pinkeye has prevailed among horses to some extent.

The number of colts foaled in 1893 is given at 105,427.

The following lable gives the number of horses assessed in the State since 1855, and their equalized valuation, as well as the number of colts foaled each year:

YEAR.	Assessors' Returns.		Number colts. foaled.
	Number.	Value.

DAIRY PRODUCTS.

MILK.

There was a difference of nearly 20,000,000 gallons between the milk sold in 1893 and 1894, in favor of the former year. The milk sold in 1894 amounted to 96,575,416 gallons.

The price received for it, 12 cents per gallon, was a fair average. The total value of the milk sold in Illinois in 1894 was $11,480,394.

The following table gives the amount, price and value of the milk sold in the State the last eighteen years:

YEAR.	Gallons sold.	Price per gallon.	Total value.
1877	17,124,506	$0 11 1-6	$1,912,236
1878	30,567,415	10½	3,209,579
1879	96,659,845	08	7,732,788
1880	38,986,861	09 1-6	3,573,796
1881	40,153,488	09½	3,814,581

1894	96,575,416	12	11,480,394

CREAM.

Cream as well as milk shows a marked decrease from the quantity sold in 1893.

According to the reports but 1,879,310 gallons were sold, and it brought only 47 cents per gallon, the lowest price reported for a number of years.

The total value of the cream sold in the State this year was $891,175.

The quantity and value of the cream sold in the State since 1876 is given in the following table:

YEAR.	Gallons sold	Price per gallon.	Total value.
1877	2,744,259	$0 55	$1,509,342
1878	62,707	52	32,608
1879	230,947	49	112,943
1880	601,314	50	300,657
1881	1,380,936	51	704,279
1882	2,188,396	62	1,356,805
1883	2,324,579	57	1,329,826
1884	1,479,183	40	600,219
1885	2,553,415	46	1,184,986

1891	2,683,844	59	1,587,500
1892	1,453,945	62	909,236
1893	3,895,823	67	2,603,233
1894	1,819,310	47	891,175

BUTTER.

Butter alone, among the products of the dairy, shows an increase this year over 1893. There were 16,782,156 pounds sold in 1894, at an average price of 20 cents, which is lower than usual, and the value of the butter sold during the year, $3,309,292, has not been so small since 1878.

In the following table will be found the quantity and value of the butter sold in Illinois during the past eighteen years:

YEAR.	Pounds sold.	Price per pound.	Total value.
1877	18,970,227	$0 20	$3,794,045
1878	17,997,652	15	2,699,648

CHEESE.

The following table shows the quantity and value of the cheese sold in the State since 1876:

YEAR.	Pounds sold.	Price per pound.	Total value.
1877	4,502,671	$0 12	$540,320
1878	5,139,914	10	513,691
1879	6,618,212	13	860,367
1880	6,187,680	13	803,398
1881	5,837,974	15	875,696
1882	5,252,036	14	734,285
1883	4,931,826	14	672,474
1884	4,795,677	10	488,622
1885	2,312,266	10	230,795
1886	2,557,865	10	267,503
1887	3,484,933	12	422,018
1888	2,064,134	12	253,618
1889	1,600,592	12	185,778
1890	1,704,536	12	205,669
1891	1,186,133	12	148,488
1892	607,115	13	77,388
1893	1,513,690	11	174,044
1894	849,584	11	93,180

Tables published elsewhere in this report give, by counties, the quantity and value of the dairy products of the State for 1894.

An examination of these tables discloses the fact, perhaps not generally known, that the dairy interest is very slightly developed in the central and southern divisions of the State—fully nine-tenths of the amount received from this industry being in the northern division.

It will be a surprise to many who have paid no attention to this subject, to learn that the products of the dairy sold, not including that used by the producer, amounted in 1894, when prices were below the average, to nearly $16,000,000.

FRUITS.

APPLES.

Although there were many more apples this year than the four previous years, the total crop of 2,542,798 bushels was much below what we expect from the large number of trees in the State.

The fruit was not of very good quality, but the small quantity kept the price up to about a fair average.

Seventy-four cents per bushel was the average price obtained, and the total value of the crop, $1,389,067, was the greatest since 1889.

The following table gives the number of bushels of apples and the value of the crops since 1876:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877	5,395,351	$0 80	$4,316,281
1878	4,940,811	65	3,211,527
1879	5,858,690	75	4,469,017
1880	10,342,186	56	5,791,624
1881	2,659,529	1 22	3,244,625
1882	6,557,128	80	5,245,702
1883	6,818,520	75	5,134,042
1884	4,152,925	65	2,987,850
1885	3,778,644	61	2,292,731
1886	4,037,765	52	2,118,640
1887	1,958,338	85	1,704,695

1890	1,460,408	96	1,398,954
1891	1,613,430	63	1,022,036
1892	570,832	1 10	614,471
1893	804,075	1 30	1,034,735
1894	2,542,798	74	1,889,067

PEACHES.

Not much more than half as many peaches were raised in Illinois this year as last, only 63,698 bushels being reported. This is the smallest peach crop in Illinois since 1890.

The average price per bushel was $1.10, and the total value of the crop $70,958.

The following table gives the quantity and value of the peaches produced in the State during the past eighteen years:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877	402,587	$0 92	$370,280
1878	607,292	62	376,521
1879	25,749	1 34	34,503
1880	398,970	80	219,176
1881	96,507	1 55	149,586
1882	319,911	83	265,526
1883	260,923	1 10	286,765

1889	177,145	77	136,782
1890	37,170	1 30	48,259
1891	107,646	1 25	133,713
1892	195,380	1 00	200,072
1893	114,840	1 00	116,704
1894	63,698	1 10	70,958

PEARS.

In ten years there has not been so small a pear crop in Illinois as this year, when but 5,161 bushels were raised.

The price received per bushel, $1.35, was above the average. The total value of the pears raised was $7,053.

The following table gives the extent and value of the pear crop of the State since and including 1877:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877	16,318	$1 35	$22,704
1878	13,510	1 25	16,887
1879	6,134	1 55	9,508
1880	35,724	1 30	46,428
1881	14,155	1 80	25,443
1882	9,964	1 33	13,252
1883	7,128	1 80	12,737
1884	4,418	1 40	6,128

1888	5,372	1 00	5,?33
1889	12,616	93	11,746
1890	7,374	1 25	9,351
1891	8,969	99	8,149
1892	8,941	1 20	10,703
1893	7,929	1 20	9,331
1894	5,165	1 35	7,053

GRAPES.

The quantity of grapes produced in this State this year, 1,731,089 pounds, is larger than the crops of 1892 and 1893.

An average price per pound of 3 cents was received, making the total value of the crop $52,890.

The following table gives particulars concerning the grape crop of the State for the past eighteen years:

YEAR.	Pounds produced.	Price per pound.	Total value.
1877	3,002,748	$0 03	$92,782
1878	1,322,636	03	57,679
1879	3,174,952	03	95,548
1880	7,833,011	03	234,991
1881	1,115,902	04	55,795
1882	1,013,390	04	40,536

OTHER FRUITS AND BERRIES.

The following table gives the acreage and value of other fruits and berries not named above for the past eighteen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877	4,523	$35 53	$178,800
1878	2,569	55 51	197,581
1879	3,111	59 62	185,488
1880	7,803	29 65	231,417
1881	7,670	26 34	298,086
1882	5,881	47 50	279,360
1883	4 583	58 33	267,313
1884	10,181	24 63	250,747
1885	6,401	32 46	305,123
1886	7,884	29 82	235,140
1887	7,528	27 25	205,140
1888	5,908	25 10	148,340
1889	5,626	22 50	126,685
1890	5,213	18 42	96,049
1891	4,897	23 76	116,340
1892	3,605	39 79	143,456
1893	2,388	47 12	112,523
1894	1,755	61 24	107,484

STRAWBERRIES.

Very few strawberries were raised in Illinois this year, their value being but $43,365. Of this amount $14,309 was produced in northern Illinois, $4,037 in the central and $25,019 in the southern division of the State.

A table published elsewhere in this report gives the value of the crop in each county in the State.

WATERMELONS.

The value of the watermelon crop this season was much larger than last year, it amounting to $55,112.

A table published elsewhere in this report gives the value of the crop in each county in the State.

BEES AND HONEY.

Of the 542,796 pounds of honey produced in Illinois in 1894, 321,249 pounds was the product of the northern portion of the State, 113,460 pounds of the central, and 108,087 of the southern grand division. The average price per pound was 14 cents, and the total value of the honey produced was $76,782.

There were 70,113 hives of bees reported this year, an increase of 12,403 over 1893.

POULTRY AND EGGS.

There was $1,190,238 worth of poultry sold in the State this year, over half of which was sold in northern Illinois.

The eggs sold during the year amounted to $979,078.

INSECT INJURY TO CROPS.

Not nearly so much injury was done to crops by chinch bugs as was anticipated early in the season, although they were in evidence in many counties. Those making special note of them December 1 are Bureau, Carroll, Knox, Marion and Randolph. Hessian fly was reported in wheat in the counties of Edgar, Schuyler, Effingham, Jasper, Johnson, Lawrence, Randolph and Wayne.

In Jo Daviess county cut worms and ants were injurious to sod corn, and in Knox county a grub has eaten the grass roots to a small extent.

SUMMARY.

The following table gives in small space the value of the principal farm products and live stock of Illinois for the year 1894:

Corn	$79,605,353
Winter wheat	17,480,723
Spring wheat	360,630
Oats	36,856,979
Rye	918,544
Barley	220,130
Buckwheat	31,491
Hay	24,581,760
Timothy seed	329,608
Clover seed	741,820
Hungarian and millet seed	13,970
Flax seed	3,128
Irish potatoes	4,183,411
Sweet potatoes	213,125
Turnips and other root crops	231,210
Broom corn	889,459
Sorghum	346,285
Beans	34,207
Castor beans	51,695
Tobacco	201,054
Other crops not named	67,484
Apples	1,889,067
Peaches	70,958
Pears	7,053
Grapes	52,890
Strawberries	43,365
Watermelons	55,112
Other fruits and berries	107,484
Wine	108,921
Honey	76,782
Horses (equalized value)	13,500,532
Beef cattle (equalized value)	11,258,090
Dairy cows	20,178,508
Hogs (equalized value)	4,332,238
Sheep (equalized value)	698,008
Wool	390,791
Milk sold	11,480,394
Cream sold	891,175
Butter sold	3,309,292
Cheese sold	93,180
Poultry sold	1,190,238
Eggs sold	979,078
Total	$238,075,222

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary

*If the product had been sold at prevailing prices December 1, it would have returned this amount to the producer.

NAMES AND POST OFFICE ADDRESSES

—OF—

CROP CORRESPONDENTS

STATE BOARD OF AGRICULTURE,

FOR THE YEAR 1894,

WITH DATE OF APPOINTMENT.

ADAMS COUNTY—
1877, A. R. Wallace, Camp Point.
1879, G. W. Dean, Adams.
1883, H. C. Cupp, Fall Creek.
1888, C. H. Rankin, Fall Creek.

ALEXANDER COUNTY—
1888, S. H. Yates, Commercial Point.
1891, C. O. Foster, Commercial Point.

BOND COUNTY—
1877, John V. McFarland, Reno.
1882, W. D. Henry, Beaver Creek.
1884, E. L. Willford, Old Ripley.
1885, J. B. Denny, Sorrento.
1885, W. H. Taylor, Tamalco.

BOONE COUNTY—
1877, George Reed, Belvidere.
1877, S. C. Fox, Garden Prairie.
1885, Stanley T. Heath, Capron.

BROWN COUNTY—
1889, W. B. Rigg, Mt. Sterling.
1889, Jos. W. Curry, Mt. Sterling.

BUREAU COUNTY—
1877, James F. Mallet, Milo.
1878, J. Y. Spangler, New Bedford.
1885, R. B. Frary, LaMoille.
1886, C. P. Mason, Buda.

CALHOUN COUNTY—
1881, M. A. Kamp, Kampsville.
1891, Jacob Auer, Deer Plain.
1891, Isaac S. Berry, Batchtown.
1891, John A. Squier, Hardin.

CARROLL COUNTY—
1882, John Cole, Thompson.
1882, S. Preston. Mt. Carroll.
1888, Whitney Inman, Milledgeville.

CASS COUNTY—
1878, John H. Goodell, Chandlerville.
1878, John Beggs, Ashland.
1878, John K. Clark, Bluff Springs.

CHAMPAIGN COUNTY—
1877, W. A. Conkey, Homer.
1885, W. E. Dawley, Seymour.
1888, W. H. Morgan, Tolono.

CHRISTIAN COUNTY—
1877, J. B. White, Morrisonville.
1877, John W. Hunter, Owaneco.
1877, A. B. Herdman, Morrisonville.
1878, O. S. Nash, Sharpsburg.
1880, J. R. Hill, Edinburg.
1885, J. Slate, Edinburg.

CLARK COUNTY—
1877, James B. Sheapley, Martinsville.
1877, F. B. Ennis, Dolson.
1877, R. R. Scott, Casey.
1880, L. B. Anderson, Darwin.
1880, Jerry Ishler, Martinsville.

CLAY COUNTY—
1880, Theron Gould, Bible Grove.
1882, A. W. Bothwell, Clay City.
1891, Edgar Hayes, Iola.

CLINTON COUNTY—
1878, John Burton, Trenton.
1887, W. H. H. Nichols, Carlyle.

1888, B. Pullen, Centralia.
1890, John B. Heimann, Damiansville.
1892, George A. Gerdes, Huey.

COLES COUNTY—
1880, J. F. Dora, Charleston.
1882, E. G. Patterson, Mattoon.
1884, Wm. A. Poorman, Humboldt.
1887, Garrett V. Millar, Mattoon.
1891, Chauncey R. Doty, Charleston.

COOK COUNTY—
1879, George Struckman, Bartlett.
1879, C. L. Sweet, Glenwood.
1879, Edwin M. Powell, Orland.
1880, Elbert Wheeler, Arlington Heights

CRAWFORD COUNTY—
1877, William L Heustis, Robinson.
1877, Andrew Newlin, Hutsonville.
1880, J. P. Weger, Flat Rock.
1882, William Wood, Oblong.

CUMBERLAND COUNTY—
1877, David Neal, Neoga.
1882, Jas. M. Albin, Neoga.
1883, W. D. Tabler, Toledo.
1887, David B. Green, Toledo.
1891, J. L. Mattoon, Greenup.

DEKALB COUNTY—
1881, Edwin Waite, Sycamore.
1884, Robt. Hampton, East Paw Paw.
1890, John King, Courtland.

DEWITT COUNTY—
1877, E. H. Robb, Clinton.
1882, W. R. Carle, Wapella.

DOUGLAS COUNTY—
1879, F. A. McCarthy, Filson.
1887, William Iles, Camargo.
1891, W. C. Campbell, Murdock.
1891, J. F. Bouck, Arcola.
1892, Perry N. Howe, Ficklin.

DUPAGE COUNTY—
1885, Thomas Betts, Jr., Naperville.
1888, A. D. Albro, Wayne.

EDGAR COUNTY—
1878, A. S. McCord, Paris.
1885, Morris Little, Edgar.
1887, Geo. W. Legg, Scotland.
1892, Samuel Graham, Jr., Paris.
1892, C. D. Smith, Grandview.

EDWARDS COUNTY—
1877, W. A. Shelby, Maple Grove.
1877, Charles Clark, Albion.
1888, John H. Marshall, Grayville.
1889, Ira Gould, Bone Gap.
1892, John T. Woods, Ellery.
1893, Fred Beeham, West Salem.

EFFINGHAM COUNTY—
1883, George Strong, Effingham.
1883, T. J. Dunn, Elliottstown.
1885, William Blakeley, Altamont
1888, Samuel Bartley, Edgewood,

FAYETTE COUNTY—
1877, O. E. Lovett, St. Elmo.
1892, A. C. Davis, Farina.
1892, A. H. Wing, Vandalia.
1894, Joseph Carson, Brownstown.

FORD COUNTY—
1877, James Ogilvie, Caberey.
1879, S. J. LeFevre, Gibson City.
1892, J. D. Carroll, Melvin.
1892, L. Corbley, Paxton.
1892, N. M. Kemp, Paxton.
1892, W. B. Flora, Paxton.

FRANKLIN COUNTY—
1889, Wm. Browning, Osage.
1889, John A. Coleman, Frankfort.
1893, Aaron N. Webb, Webb's Hill.
1893, M. N. Webb, Gresham.

FULTON COUNTY—
1877, M. Rawalt, Canton.
1878, John Prickett, Lewistown.
1881, S. B. Bennett, Fairview.
1887, Cyrus G. Bucher, Astoria.

GALLATIN COUNTY—
1880, Martin Doherty, Shawneetown.
1883, R. A. Lamb, Ridgeway.
1889, John M. Bowling, Equality.

GREENE COUNTY—
1877, C. W. Brace, Kane.
1877, S. G. Russell, Bluffdale.
1878, Elon A. Eldred, Carrollton.
1887, C. I. McCollister, White Hall.
1887, W. H. Ellis, Greenfield.

GRUNDY COUNTY—
1884, W. F. Pierce, Verona.
1891, F. Dirst, Minooka.
1892, Louis Germain, Gardner.
1892, Wm. Reardon, Morris.

HAMILTON COUNTY—
1887, Geo. K. Edwards, McLeansboro.
1889, J. D. Lockwood, Braden.
1891, C. M. Hall, Dahlgren.

HANCOCK COUNTY—
1877, E. J. Baxter, Nauvoo.
1885, J. M. McMillan, Denver.
1885, W. A. Moore, Elvaston.
1891, C. S. Campbell, La Harpe.

HARDIN COUNTY—
1887, John C. Rose, Wolrab Mills.
1888, John Jack, Cave-in-Rock.
1890, W. J. Banks, Karber's Ridge.
1892, J. G. Gillett, Karber's Ridge.
1892, John Gross, Grossville.

HENDERSON COUNTY—
1877, John H. McDougall, Biggsville.
1882, Charles Vaughn, Lomax.

HENRY COUNTY—
1877, N. C. Gilbert, Geneseo.
1877, John A. Widney, Alpha.
1878, Joshua C. Edwards, Cambridge.
1885, S. H. Moon, Annawan.
1889, Horace S. Gilbert, Geneseo,

IROQUOIS COUNTY—
1878, A. C. Johnson, Woodland.
1879, Robert Caldwell, Sheldon.
1882, B. W. Gilbourne, Herscher, (Kankakee County.)
1883, S. Williams, Woodland.
1887, F. M. Chapman, Gilman.
1888, Robert M. Perry, Cisne Park.

JACKSON COUNTY—
1879, George C. Hanford, Makanda.

JASPER COUNTY—
1876, W. E. Barrett, Lis.
1876, A. Wilson, Wheeler.
1876, Albert Hammer, Rose Hill.
1884, R. S. Cummins, Rose Hill.
1892, W. W. Kibler, Hunt City.
1892, Louis Valbert, St. Marie.

JEFFERSON COUNTY
1878, George L. Whitlock, Dix.
1879, L. E. Jones, Opdyke.
1879, E. S. Noleman, Irvington, (Washington County.)

JERSEY COUNTY—
1884, John G. Dougherty, Otterville.
1887, Joseph Chambers, McClusky.
1891, M. C. Stanley, Jerseyville.
1891, Wm. Lawler, Fieldon
1891, Jas M. Segraves, Haynes.

JoDAVIESS COUNTY.
1885, Geo W. Pepoon, Warren.
1892, H. N. Frentress, East Dubuque.
1892, Joseph Vartz, Apple River.
1893, J. A. Hammond, Hanover.

JOHNSON COUNTY.
1880, J. F. Casper, Ozark.
